Getting started with Chromium

Document Online version: <https://arenatheme.gitbooks.io/chromium/content/>

New to Shopify?

If you're setting up a Shopify store for the first time, we recommend taking a gander at the Shopify [Help Center](#) for a full overview of the platform.

Frequently asked questions [ArenaTheme FAQs](#)

If you have any questions that are beyond the scope of this help file, please feel free to send us a message to support@arenathemes.com

If you are satisfied with our themes, please rate us 5 stars at [ThemeForest Download Tab](#). It encourages us to continue the research to optimize our products and services.

THANK YOU FOR PURCHASING OUR THEME !

Arena STC

You can add a theme in **two ways**:

- **Upload theme package** file .zip on your computer to Shopify.
- Instal our Shopify app **Arena Installaton**.

Arena Installation app support

- Quickly and easily **Installation & Switch** theme in case the theme support multi-style **without upload file**.
- Importing our sample data includes **product data**, **metafield** settings, our **prefine setting data** for multi style **setting data** theme style.

Your website will have the same interface as our theme demo.

Step by Step

1. Install Theme Package

1.1. [Install theme by Arena Installation App.](#)

1.2. [Install theme by Upload Theme Package](#)

2. [Setup converting currencies in your store](#)

3. [Install Requirement Shopfiy Apps](#)

4. [Setup Shopify Metafield for Extend Function](#)

5. [Apply Theme Styles](#)

Arena Installaton Application

This is an application for Shopify designed by our engineers to support customers easily on theme installation, as well as notifications about upgrades.

Connect your Shopify store with the App.

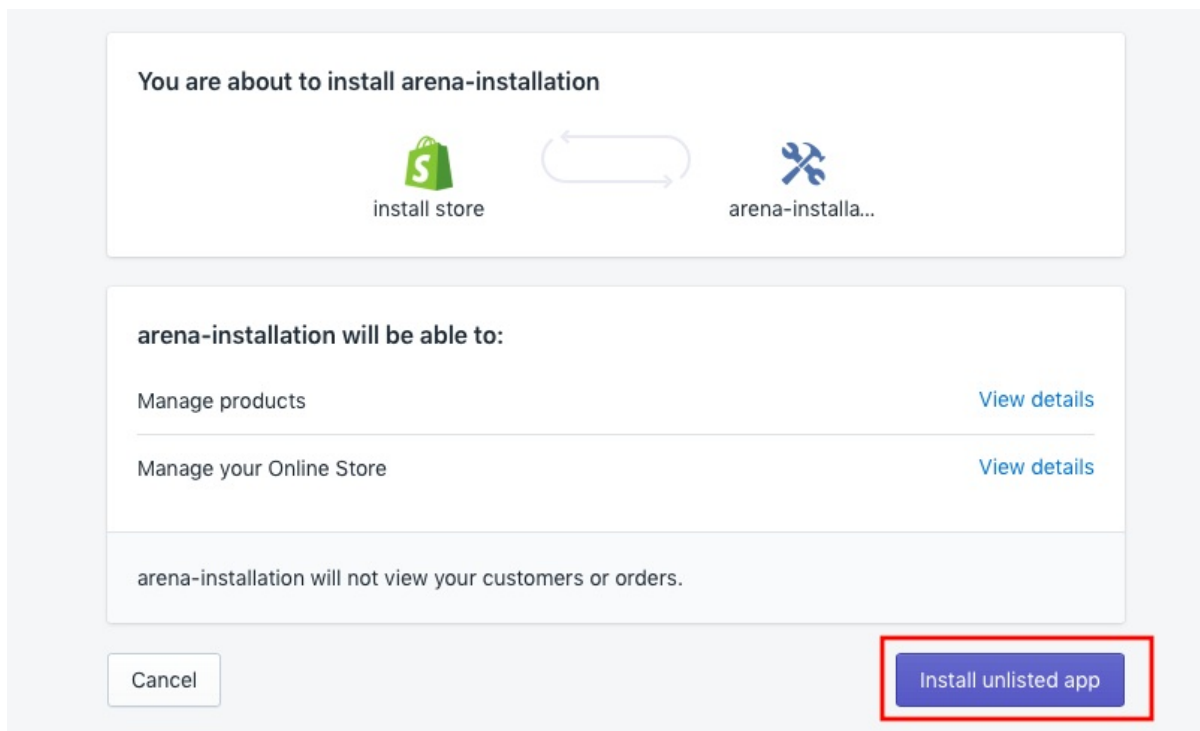

1. Go to <https://install.arenathemes.com>
2. **Enter Your Store URL**, click **Install** and Login your Shopify

Enter your Shopify store's URL:

Install

3. Click **Install unlisted app**

4. **Insert your purchase code.** If you don't know how to get it [please refer here:](#)

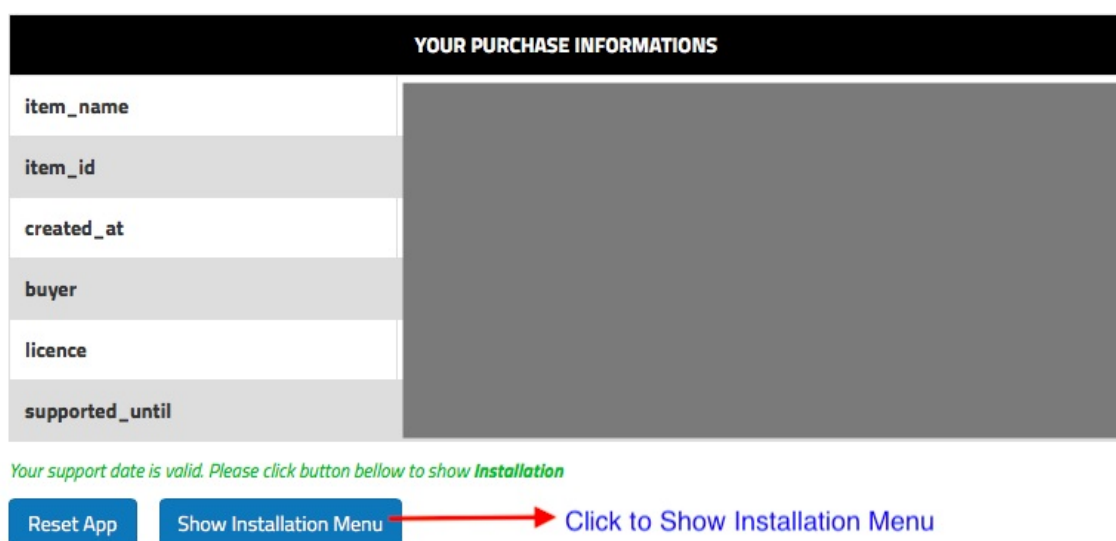

ARENATHEME INSTALLATION

Please Enter Your Purchase Code:

Verify

[Insert Your Envato Purchase Code](#)

5. Click **Show Installation Menu**

6. Check **Install Theme Package** option and click **Install Theme** and wait to finish the installation process.

7. You may check other options when you already **BACKUP YOUR DATA**.

If you store is **new** without data you may select them on together at **step 6**.

<https://help.shopify.com/en/manual/sell-online/online-store/how-do-i-duplicate-my-store>

- **Install Blogs And Article**
- **Install Collections**
- **Install Products**
- **Install Pages.**

Install Theme Package	Check this option our App will create new entire theme package on your store admin	<input type="checkbox"/> Enable? Import Theme Package From Our Demo Data
Install Blogs And Article	Check this option our App will install our theme's blogs category and articles to your store admin	<input type="checkbox"/> Enable? Import Article & Blog Content From Our Demo Data
Install Collections	Check this option our App will install our theme's collection to your store admin	<input type="checkbox"/> Enable? Import Our Collection Data
Install Products	Check this option our App will install our theme's products (include variants, tags, ...) to your store admin	<input type="checkbox"/> Enable? Import Our Product Data

BE CAREFUL WITH RED OPTIONS - IT'S REQUIRE CLEAR YOUR DATA & CANNOT RECOVER

Install Theme

- Import PRODUCT, BLOG & ARTICLE, COLLECTION, PAGE SAMPLE DATA will require the removal of corresponding data from your store to avoid the conflict. IT WILL DELETE DATA & CANNOT RECOVER.
- Please ensure that you have backed up your data or accepted the deletion of this data.
- **To backup Product Data please follow the instruction here**
<https://help.shopify.com/manual/products/import-export/export-products>
- **Don't close browser during installation.**

1. Download the theme from [ThemeForest Download](#) and unzip it on your computer. If you don't know how to do that you can [refer to this link](#)

Following items are inside:

- documentation: theme manual folder
 - **theme-package: contains the theme's installation zip files**
 - file-upload: contains file with links to images, video is used in our demo.
 - **arenafont**: contains icon font arenafont and detail
 - pre-setting: contains the sample data file **settings-data.json** as our demo. In the case of many styles (child-theme), this folder contains samples data according to the styles that you can install.
2. From your Shopify admin, go to **Online Store > Themes**.
 3. In the **More themes** area, click **Upload theme**.
 4. From the **Upload theme** window, click **Choose File** to select the **.zip file** that you want to upload.
 5. Your new theme will show up below your current theme. It is installed, but not published. When you're ready to unveil your new look to the world, click **Publish theme**.

Requirement Apps

By default, our theme support 2 Shopify apps, which are all free and **must be installed to use with corresponding functions in our theme.**

I. Wishlist & Compare for Shopify Store.

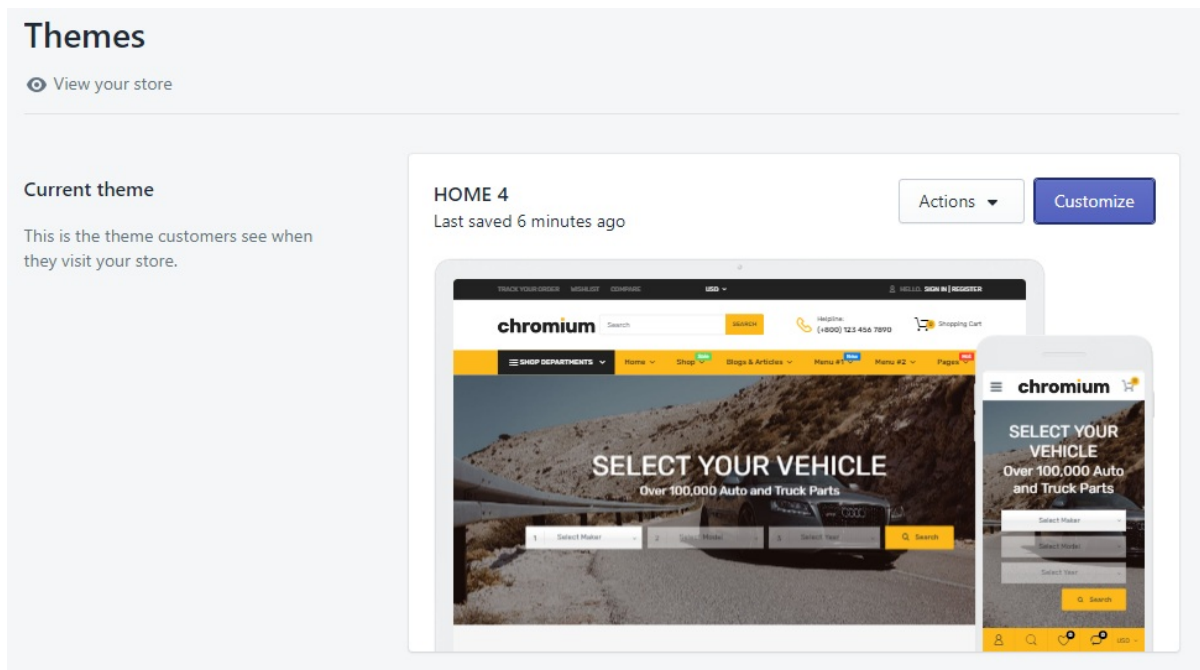

URL: [Arena Wishlist Compare](#)

Wishlist & Compare is not offered by Shopify as a function so we have built a Free Shopify Application to assist customers.

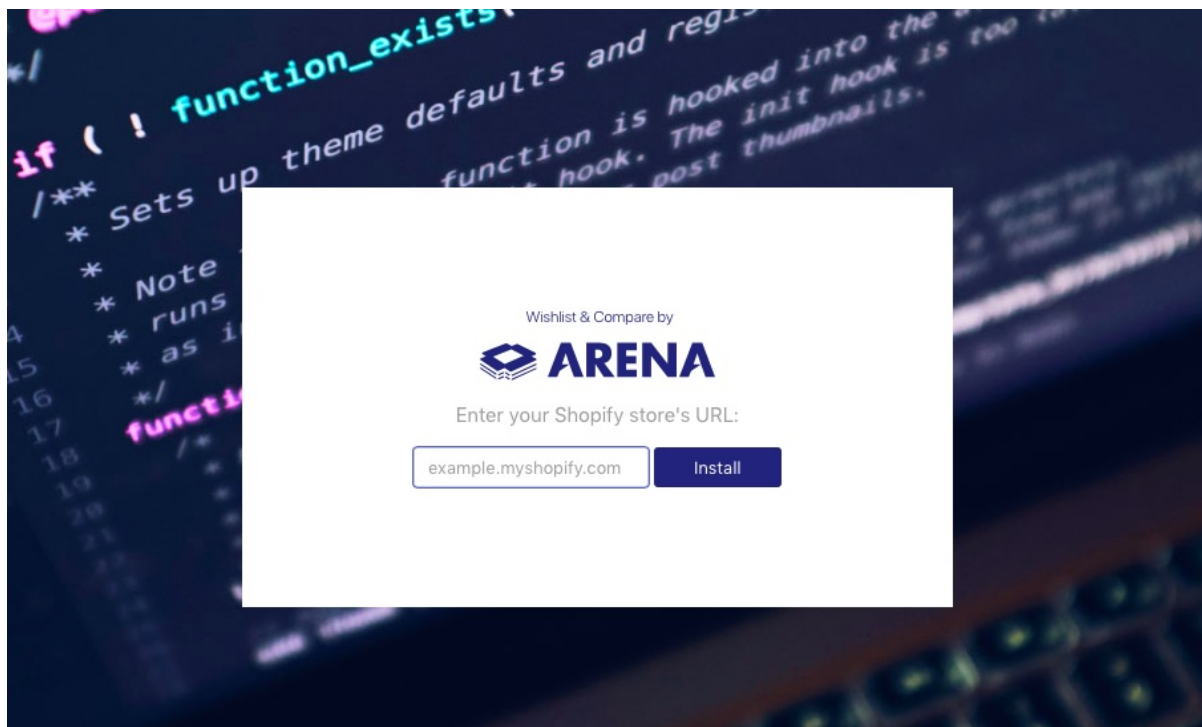

- **Wishlist** is build by using Shopify App Proxy, you will not need to select the template page on your Shopify store. Wishlist function will launch as: <https://your-shopify-url/apps/wishlist>
- **Compare** require to **create and assign a separate page for the Compare page display**

To install **Arena Wishlist Compare** apply with the theme please following instruction:

1. From your Shopify admin, go to **Online Store > Themes**. Click **Action** and **Public Chromium** become **Current theme**.

2. Go to <https://apps.arenatheme.com/install>
3. Input your Shopify Store url to the form and click **Install**

4. Sign in your store and accept permission to Install app.
5. From your Shopify admin, go to **Apps > Arena Wishlist Compare** . Please ensure that you Wishlist & Compare app setting at **Enable** status

Wishlist Settings	Wishlist on your store is
Configure the general Wishlist settings that will reflect across your store.	<div>Enabled</div>
	<div>The number of products can be added to Wishlist</div> <div><div></div>20</div>
	<div>Class name for wishlist button:</div> <div><div>.add-to-wishlist .add-product-wishlist</div></div>
	<div>Class name for show wishlist button:</div> <div><div>.show-wishlist</div></div>

Compare Settings	Compare on your store is
Configure the general Compare settings that will reflect across your store.	<div>Enabled</div>

6. From your Shopify admin, Go to **Online Store > Pages** Click **Add Page** to creat page: **Compare**. Click **Save**.

The screenshot shows the Shopify Pages editor for a page titled 'Compare'. The page details section includes a title field with 'Compare' and a content area with a rich text editor. On the right sidebar, the 'Visibility' section has 'Visible (as of 2018-08-28 6:07am EDT)' selected. The 'Template' section is highlighted with a red box, showing 'Select a template for this page.' and a dropdown menu with 'page.bc_compare' selected.

7. From your Shopify admin, go to **Online Store > Themes > Customize > Theme Settings > Cart Page**. Click and select **Enable Wishlist & Enable Compare**.

Let see it work on your theme

You may Reinstall App when you change current theme to another theme by click **Install**. It's will start to generate compare file for your theme. You can also change option for Compare function:

Options to show on compare table:

- ☒ Availability
- ☒ Options
- ☒ Vendor
- ☒ Collection
- ☒ Rating

Compare layout type:

Page

If

you would like to add more function, please [contact us](#).

II. Product Review.

- Install by click [Shopify Product Reviews](#), follow next steps to install this app with your website. When finish install review app, You may setting to display Review on your website by Setting at Product Sections metion [here](#)

Compatible Shopify App.

- Orbelo <https://apps.shopify.com/oberlo>

Other Shopify App used in Chromium.

[AfterShip - Track + Engage](#)

Change Homepage Styles

The `settings_data.json` file stores the theme settings data saved from the theme editor. It can also include 'theme styles', also known as presets.

Chromium includes 4 Homepage Styles that you can switch by replace presets `settings_data.json`.

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the theme you want to edit, and then click **Actions > Edit code**
3. On **Edit code**, locate and click on the **Config** folder to reveal its content
4. Replace current **settings_data.json** by the new one at **pre-setting** folder

Adding Requirement Shopify Metafield to your store.

You can use metafields to add custom fields to objects such as products, customers, and orders. Metafields are useful for storing specialized information, such as part numbers, customer titles, or blog post summaries.

Eg. Add a short description, video embedded, PDF file embed... for each product page.

More detail <https://help.shopify.com/en/manual/products/metafields>

Adding supported Meta field for Chromium Theme

1. Currently, **custom field extensions** only support **Chrome browser** so to use you must install this browser. [Download and install here](#)
2. Download & Install [ShopifyFD Dashboard Tool Chrome Extension](#)
3. Add **New meta field** on the shop.
 - From your Shopify admin, go to **Settings > General**
 - Click **ShopifyFD Dashboard Icon** at Top Bar Chrome Browser. The Store Metafield will showup.

Bulk editing product metafield

As we've seen, metafields have three components: **a namespace, a key, and a value**.

Once you know the namespace and key for your metafield, you can display it in [the bulk editor](#) by making small changes to the URL of the bulk editing page in the Shopify Admin.

Eg. Collection page: https://shopify.com/admin/bulk?resource_name=Collection&edit=metafields.c_f.subcategory:string

In this URL, **c_f** is the **metafield's namespace** and **subcategory** is its key. You can replace these with values to match your use case. The **string** part of the URL tells Shopify about the type of data that we want to store in the metafield. The bulk editor is able to display **five types of metafields** – **string, money, boolean, select and number**.

Add an updated version of your theme to your online store

When you manually add an updated version of a theme, a second version of the theme is added to your online store. The new version is in its default state, with **none of your customizations applied**. The older version is unaffected by the update, and still has all of your code customizations.

1. [Create a backup copy of your existing theme.](#)
2. Download the new theme file from ThemeForest or install our Arena Installation App.
3. [Install the new version](#) as new theme for your store.

Before you customize your theme

Before you customize your theme, it's a good idea to do the following tasks:

- [Duplicate your theme](#) to create a backup copy. This makes it easy to discard your changes and start again if you need to.

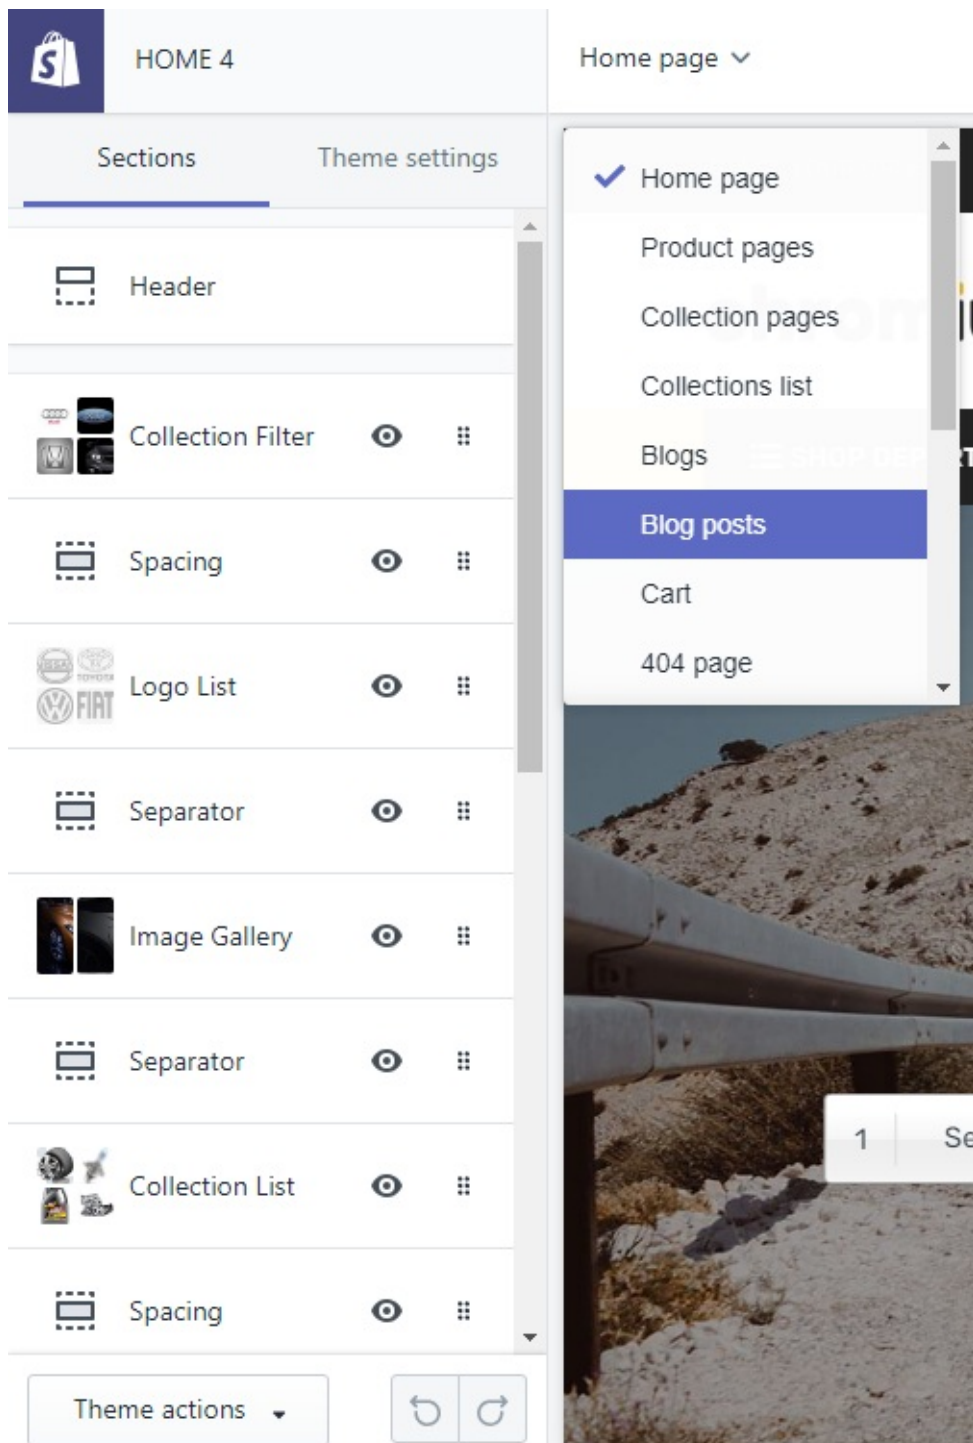

Change page to customize sections

From your Shopify admin, go to **Online Store > Themes**

- Find the theme that you want to edit and click **Customize**

Different types of pages have different theme sections. When you first open the theme editor, the settings for the home page are shown.

- To access the settings, **select the page type from the top bar drop-down menu:**

The **theme editor toolbar** is divided into **Sections** and **Theme settings**.

Next, let's explore how to configure our theme with built-in **Sections** and **Theme settings**

*(New to Shopify? Please refer to [this](#) to get knowledge of what **Sections** and **Theme settings** are)*

Sections

Sections are customizable blocks of content that determine the layout of your online store. Each theme includes static sections and dynamic sections.

Static sections

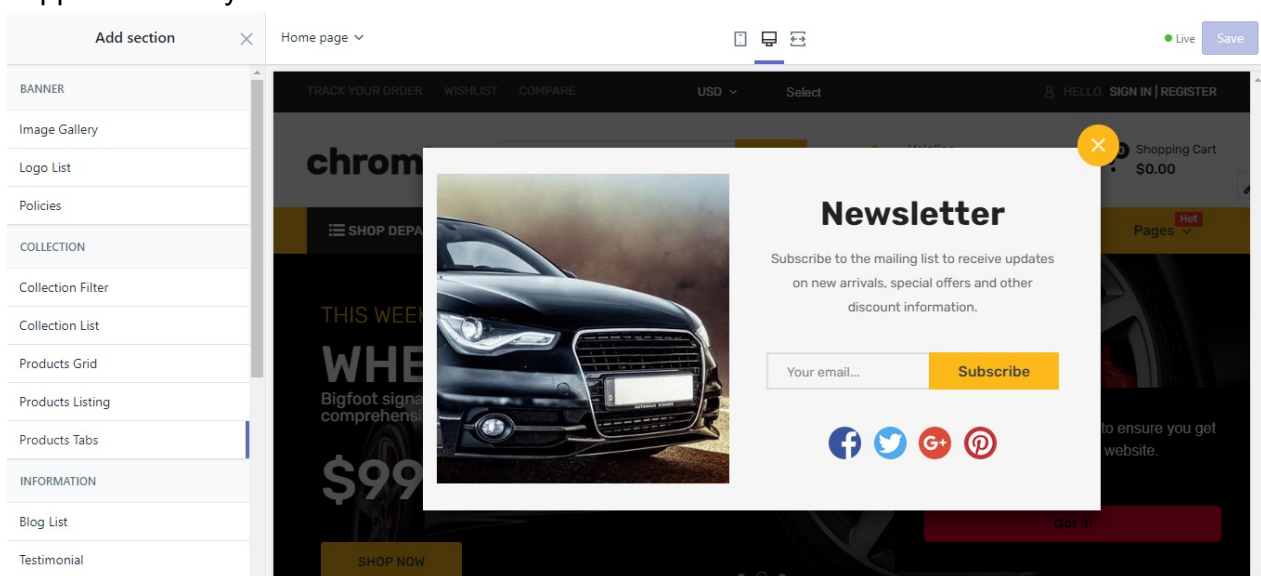

Eg: Header & Footer Section

Static sections are always in specific locations on your online store. You can [edit static sections](#), but you can't rearrange or remove them. Each type of page on your online store includes different static sections.

Dynamic sections

You can [add](#), [rearrange](#), and [remove](#) dynamic sections to customize the layout of your home page. Each theme has a unique set of dynamic sections to choose from.

****Shopify Dynamic sections now only support for Homepages. The Chromium theme now supports multi dynamic sections:**

Following topics

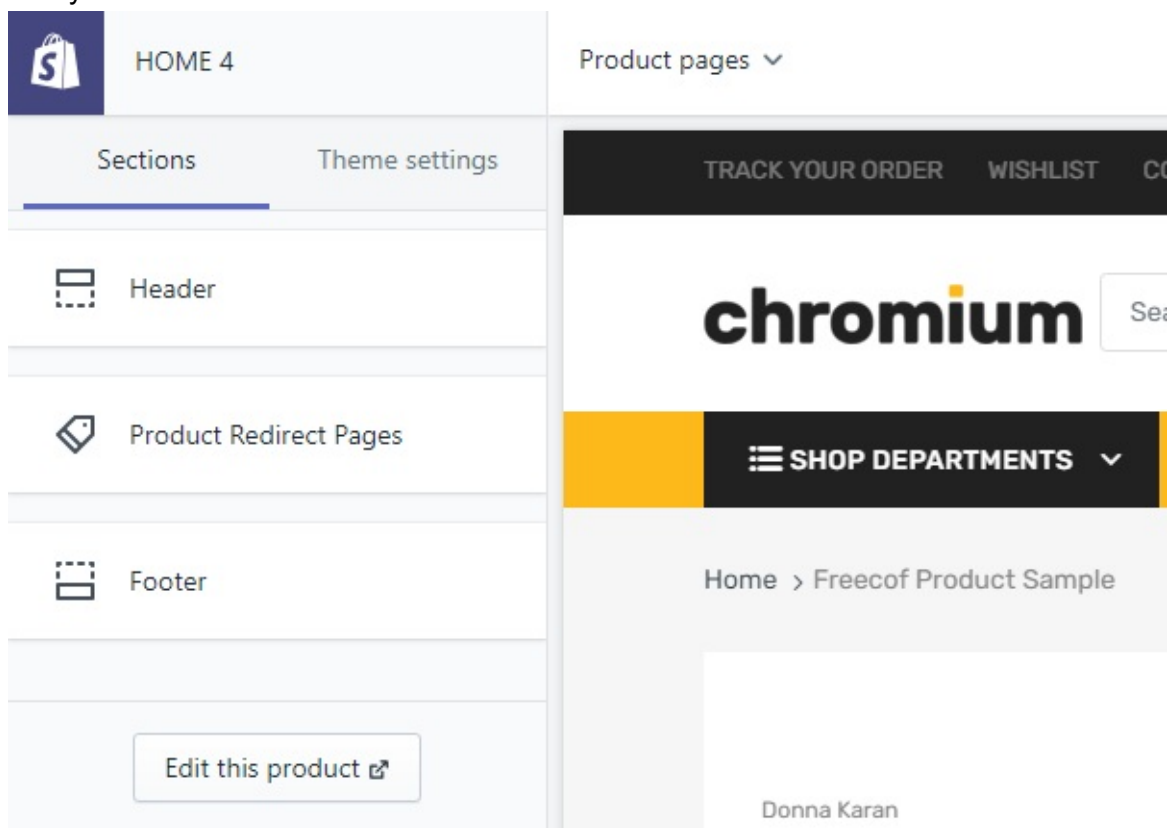

1. [Customize Sections: Add, Edit, Hide, Remove](#)
2. [Customize Theme Settings](#)

Edit static sections

You can edit the content of static sections via the following steps:

1. From your Shopify, find the theme that you want to edit and click **Customize**.
2. **From the top bar drop-down menu, select the type of page that you want to edit.**

For example, if you want to edit your **Product pages** section, then select **Product pages** from the drop-down menu. Because the **Header**, **Footer** sections appear on every page of your online store, you can edit these sections regardless of the page type that you select.

3. Click the section containing the content that you want to edit.
4. Edit the settings to suit your needs.
5. Click **Save**.

Add dynamic sections

You can add up to 25 dynamic sections to **your home page**.

From your Shopify admin, go to:

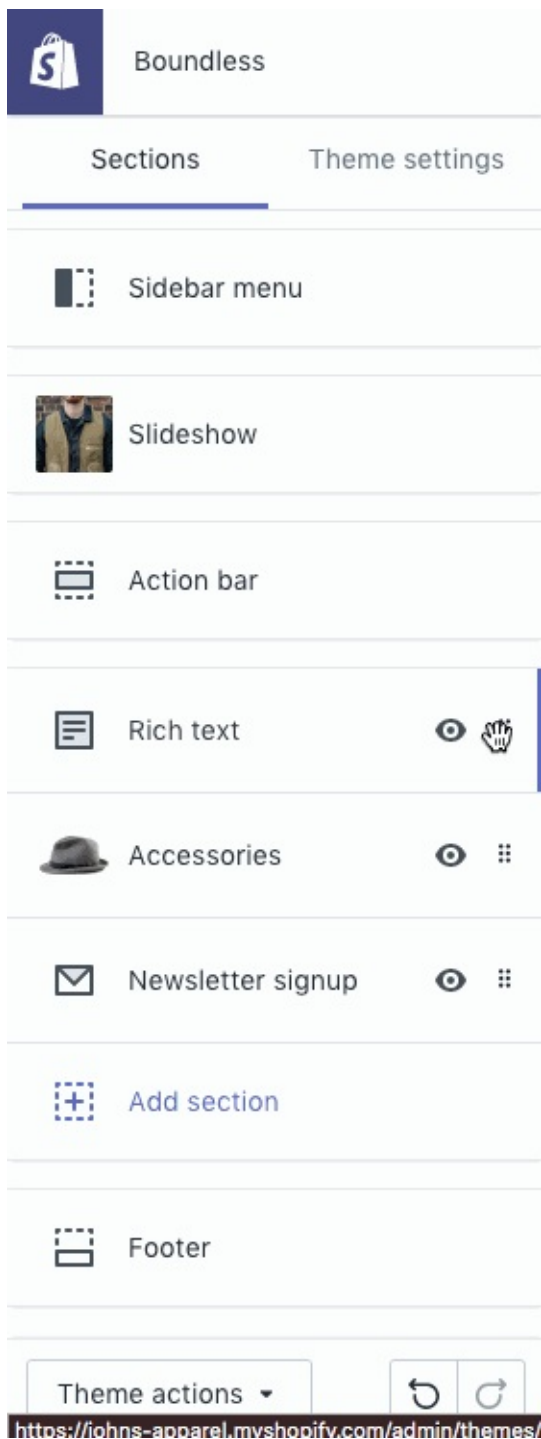

1. Find the theme that you want to edit and click **Customize**.
2. In the theme editor toolbar, click **Add section**.
3. Click the type of section that you want to add, then click **Add**. Each theme has a unique set of sections to choose from.
4. Change the section's content by adding and editing the content blocks in the toolbar.
5. Click **Save** or **Publish** to save your changes.

When you add an image to a section, the file is **added to the Files section** of your admin. You can reuse an uploaded image in other sections or pages of your store.

Rearrange dynamic sections

From your Shopify admin, go to

1. Find the theme that you want to edit and click **Customize**.
2. On the section that you want to move, click  and drag the section to a different place:

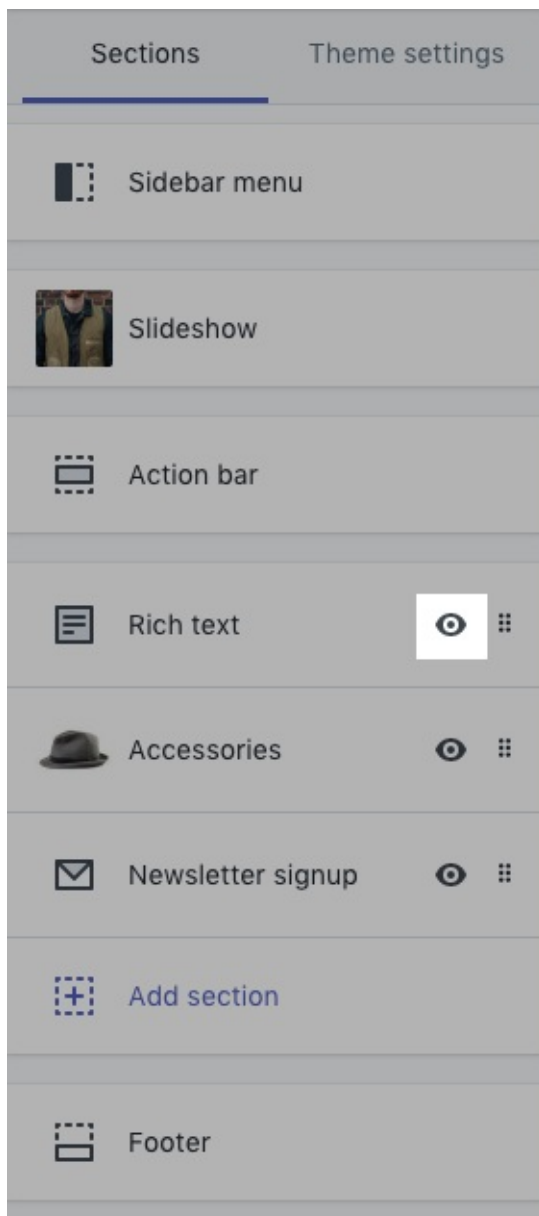

Hide dynamic sections

You can temporarily hide sections and reuse them whenever you want.

From your Shopify admin, go to

1. Find the theme that you want to edit and click **Customize**.
2. In the theme editor toolbar, click the eye icon for the section that you want to hide:

Remove dynamic sections

You can remove content from a dynamic section, or remove a dynamic section from your home page. Deleting content in this way removes the section content, but doesn't delete anything from your account. If you delete a product or collection block from a section, then that product or collection will still exist in your admin. If you delete an image in a section, you can still add that image to other sections.

You can remove content from a dynamic section.

From your Shopify admin, go to

1. Find the theme that you want to edit and click **Customize**.

2. Click the section containing the content that you want to remove.
3. In the **Content** section, click the content you want to remove from the section.
4. Click **Delete [content]**, where **[content]** is the content type (*collection*, *image*, or *logo*, for example).

You can remove a dynamic section from your home page.

From your Shopify admin, go to

1. Find the theme that you want to edit and click **Customize**.
2. In the theme editor toolbar, click the section that you want to remove.
3. Click **Delete section** at the bottom of the toolbar.

Think of theme settings like backbone of a theme.

Typography

At **Typography**, you can customize:

- Web fonts.
- Font size (in px).

Icon

At **Icon**, you can customize icons display:

- Favicon.
- Loading Icon
- General Icon Settings: Account icon, search icon, wishlist icon, compare icon, cart icon and other 4 social icons.

The theme uses **arenafont** to display icon by CSS class. You may follow [instruction](#) to know how to use it.

Colors & Style

At **Colors & Style**, you can customize:

- Website Page Layout Mode.
- Background Body Page.
- Breadcrumb.
- Header Color
- Body Color.
- Navigation Color.
- Navigation Label Color.
- Footer color.
- Buttons Style 01, 02 color.

General Settings

At **General Settings** you can customize extended function that use for theme:

- Extended function: Show Preview Panel (FOR DEMO ONLY!), Disable Ajax Cart, Enable Lazy Loading, Quick View Product, Disable Ajax Cart, Enable Catalog Mode, Enable Search Function, Back to Top button.
- Wishlist and Compare: Enable Wishlist, Enable Compare.
- Homepage: Enable Left Column Section.
- Collection Page: Select mode view default, Enable product's image blance, Fixed Image Height, Enable product's title balance.
- Product Page: Sticky Add to cart on Mobile, Select product default template.
- EU Cookie Policy.

FOMO (Fear Of Missing Out) Popups

At FOMO Popup, you can customize:

- Sales Notification Popups
- Visitor Count Popups
- Discount Popup

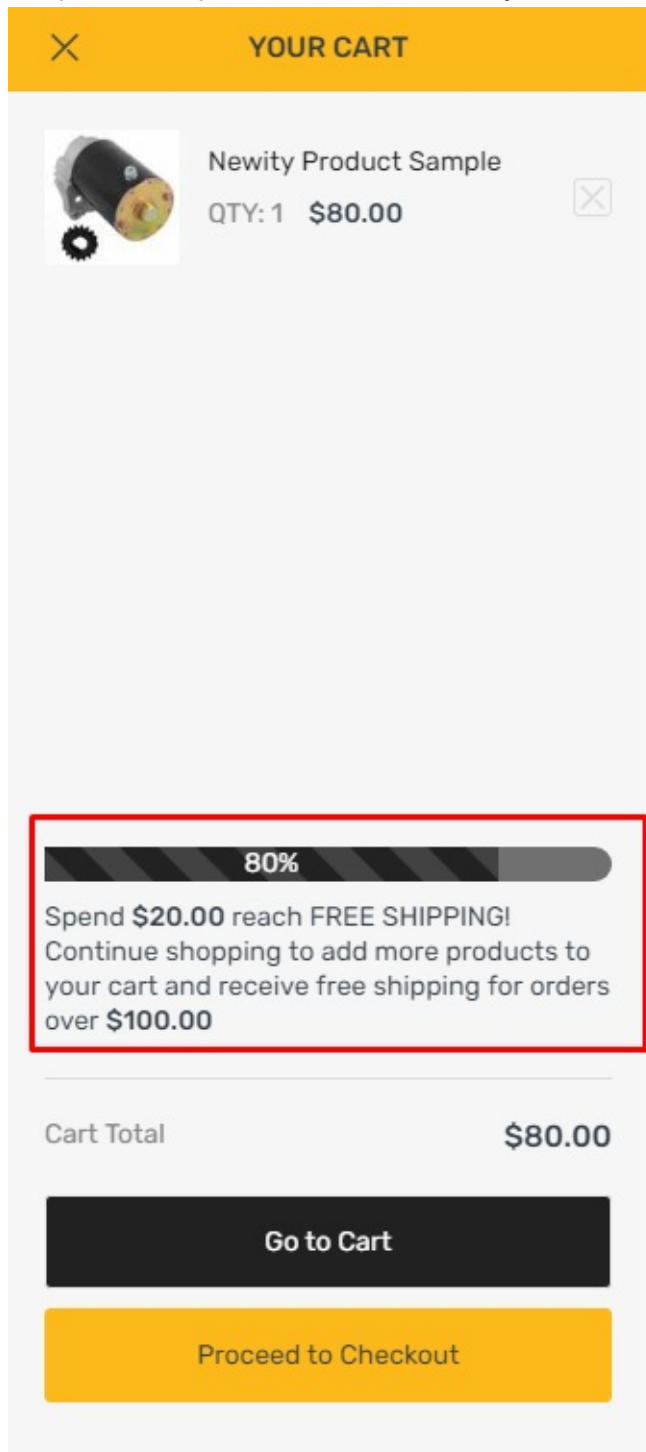

(For more info, please refer to [this](#).)

Cart Page

At **Cart Page**, you can customize:

- Block shopping cart: enable shopping cart logo on your site. Also allow you to choose to display it either as **cart drawer** or **dropdown**.

- Free shipping: this option is used as a notification to your customers to encourage them to spend a required amount of money in order to enjoy free shipping.

You can set the target amount of money (which customers need to reach in order to enjoy free shipping) here. However, your inputted figure has to be equivalent to the [free shipping rate](#) you set up.

- Multiple Currency: choose whether to show multiple currency.

Product Grid

At **Product Grid**, you can customize:

- Show product vendor, product review, hover effect for product item ...
- Add To Cart Redirect
- Sale Label, New Label
- Product Colors

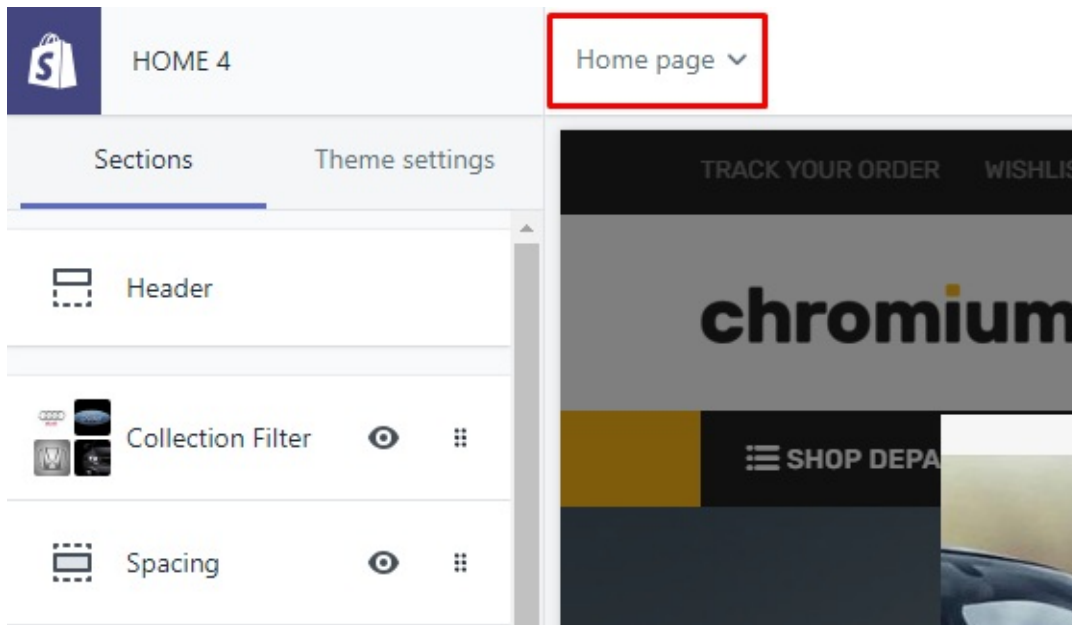

Newsletter Popup

Checkout (default Shopify settings)

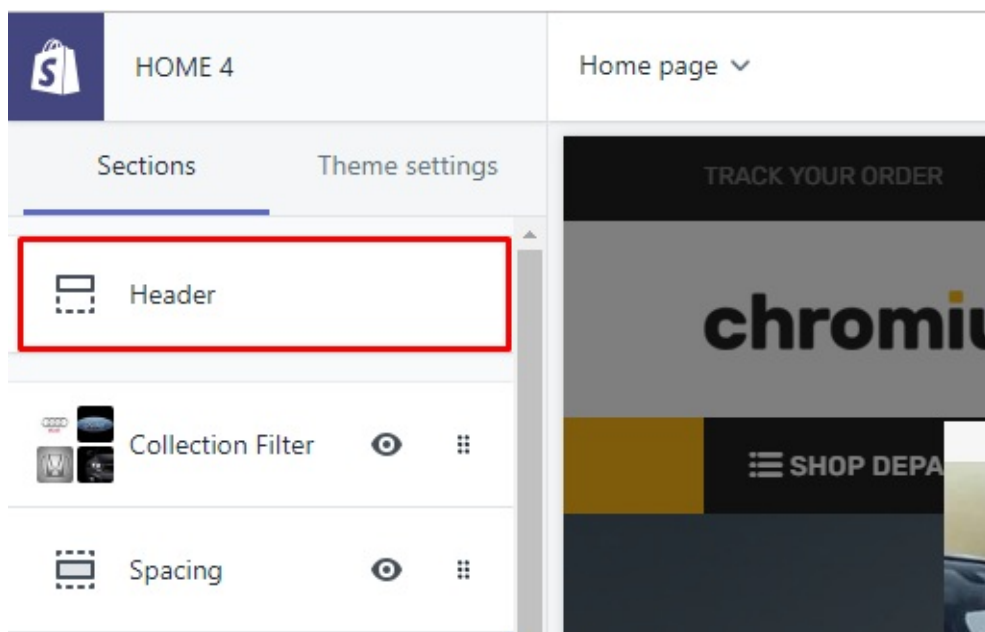

Customize Header

From your Shopify admin, go to **Online Store > Themes**

- Find the theme that you want to edit and click **Customize**
- From the top bar drop-down menu, Select **Home Page**

- Select **Header** Section

- Now you can setting your header
 - Section Layout Mode:
 - Boxed
 - Wide
 - Sticky Navigation

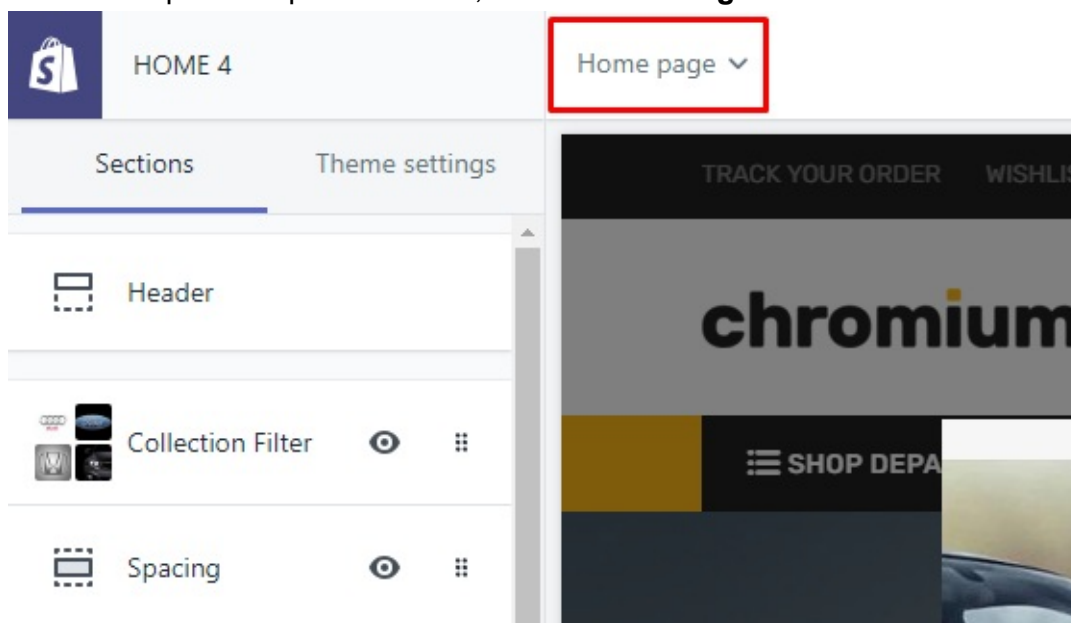

- Main logo image.
- Logo image for sticky header on mobile.
- Custom logo width (in pixels): Set your logo size.
- Header Style and Menus: Chromium support 3 header styles
- Navigation Labels: Sale, New, Hot.
- Track Your Order
- Google Translate
- Custom Text
- Phone Number

As this is a completely new Mega Menu, if you have any installation issues, please contact our support team for answers: <https://arenathemes.freshdesk.com/support/tickets/new>

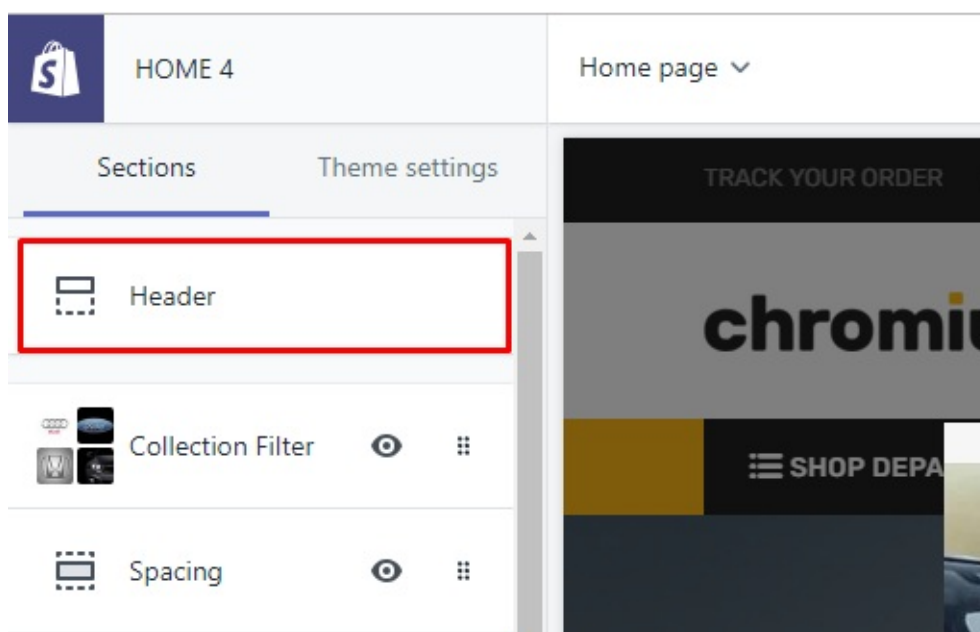

How to setup Mega Navigation

From your Shopify admin, go to **Online Store > Themes**

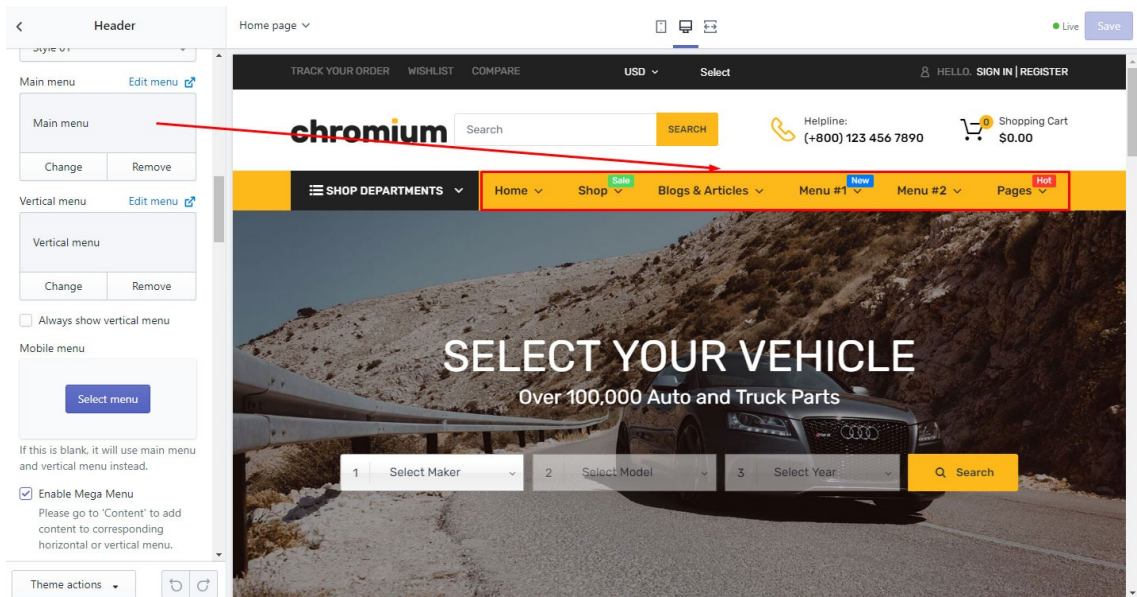

- Find the theme that you want to edit and click **Customize**
- From the top bar drop-down menu, Select **Home Page**

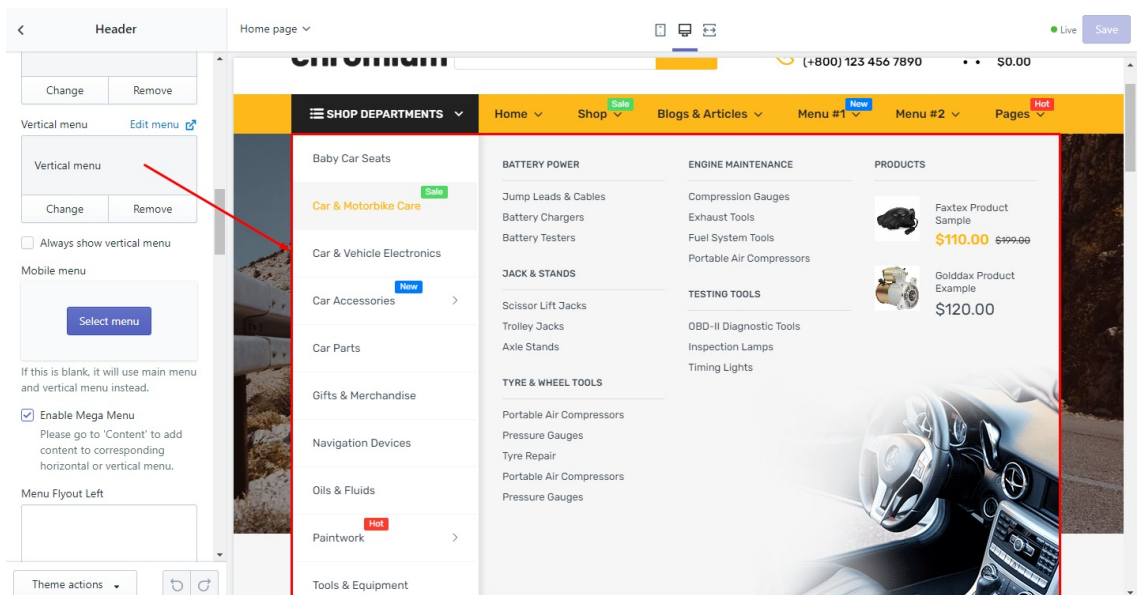

- Select **Header** Section

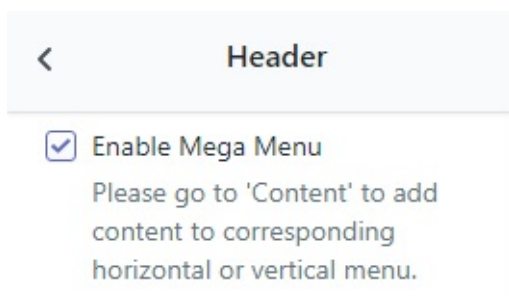

- Scroll down to **Main Menu & Vertical Menu**. Click & select **Main menu & Verticle Menu** for your website. If you dont know how to creat a menu you can follow [instruction](#)
 - Main menu:

Vertical Menu

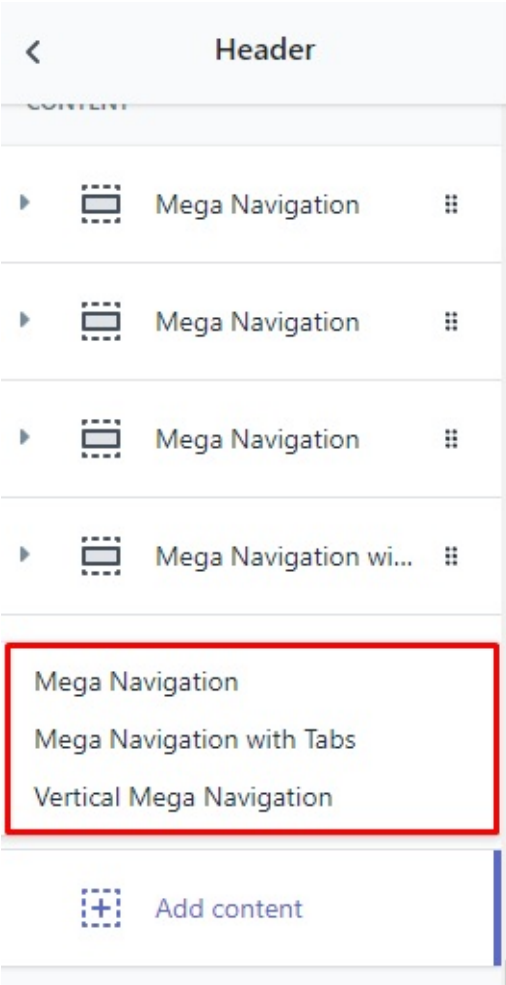

- Enable Mega Menu

- Menu Flyout Left: Catch **handle navigation** to flyout left

ADD MEGA NAVIGATION

- Click Add Content and Select type of navigation

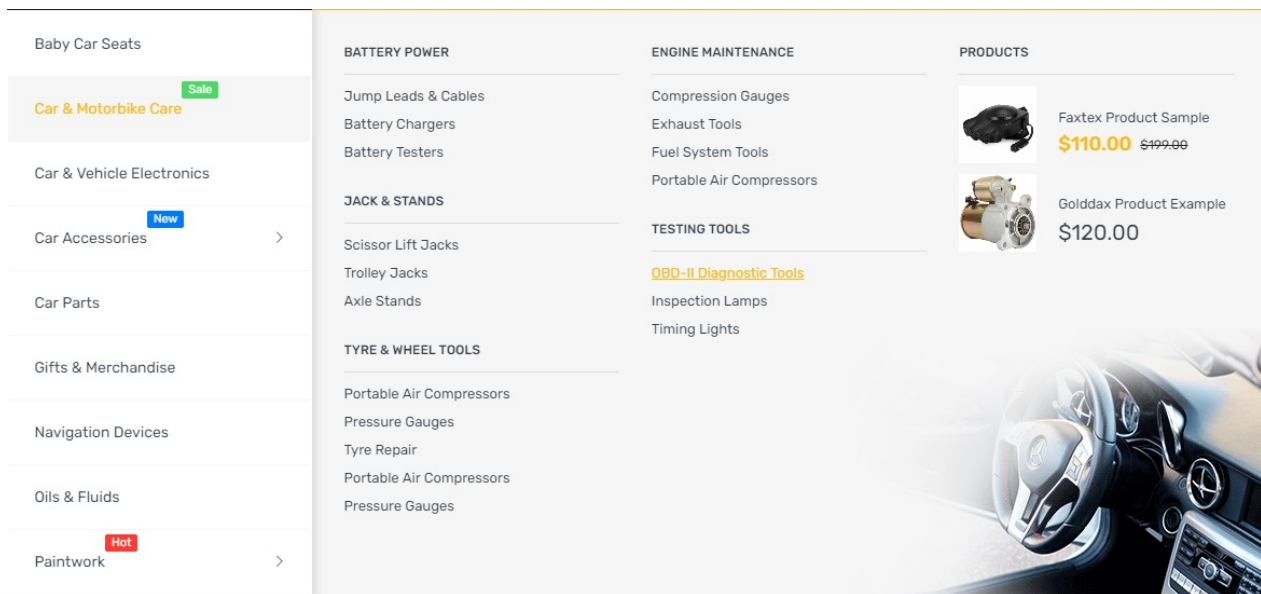

The theme support 3 type of Mega navigation styles:

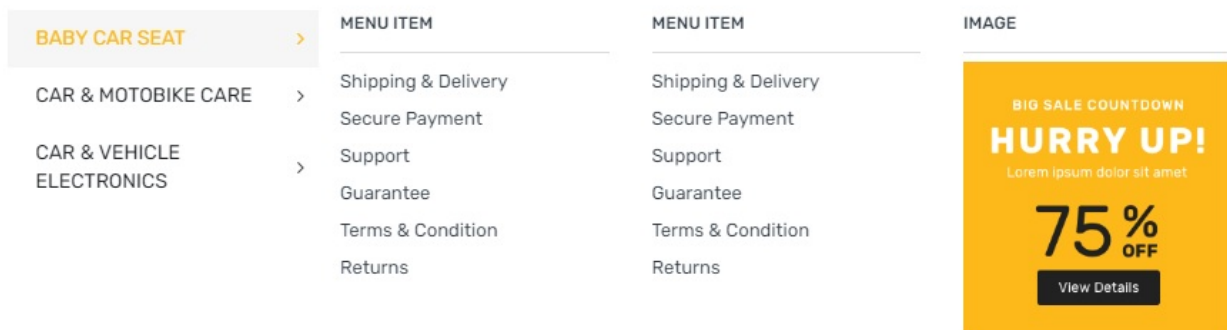

1. Horizontal Mega Navigation (aka Mega Navigation)

PRODUCTS	PRODUCTS	MENU ITEM	ENGINE MAINTENANCE
 <div>Georgeous White Dresses \$349.99</div>	 <div>Black Fashion Example \$500.00 \$380.00</div>	About Us Customer Service Privacy Policy Search Terms Contact Us Order & Returns Our Sitemap	Compression Gauges Exhaust Tools Fuel System Tools Portable Air Compressors
 <div>Golddax Product Example \$120.00</div>	 <div>Coneco Product Sample \$350.00 \$310.00</div>		TESTING TOOLS OBD-II Diagnostic Tools Inspection Lamps Timing Lights

1. Vertical Mega Navigation

1. Mega Navigation with Tabs

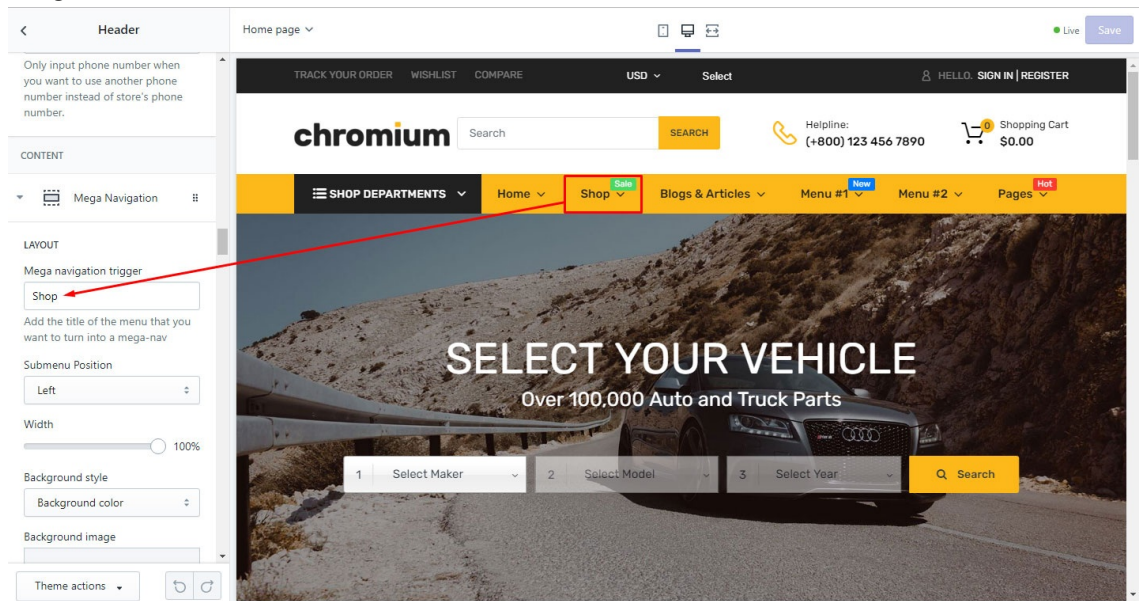

Add Horizontal Mega Navigation Content (Mega Navigation)

- Mega Navigation will show in 1 block (1 row - **4 columns**).
- Layout: 12 grid layout system. <https://getbootstrap.com/docs/4.0/layout/grid/>

Settings

- LAYOUT

- Mega navigation trigger: Add the title of the menu that you want to turn into a mega-nav

- Submenu Position: Set position for your submenu (left, right, or center)
- Width (Mega Navigation Width): Percentage when compared to **Main Menu** block.
- Background style: Select background for your Mega Navigation content
 - Background image: Set background image
 - Image size: Set Background image size
 - Background image position: Background image position
 - Background color
- Min height (unit px): Set minimum height of Mega Navigation. You can adjust the height based on the content inside to cover it
- COLUMN 01 - COLUMN 4: Select Component to display as each column.
 - Content Components: The theme support 7 component types

 fermentum facilisis

Multiple Menu Item

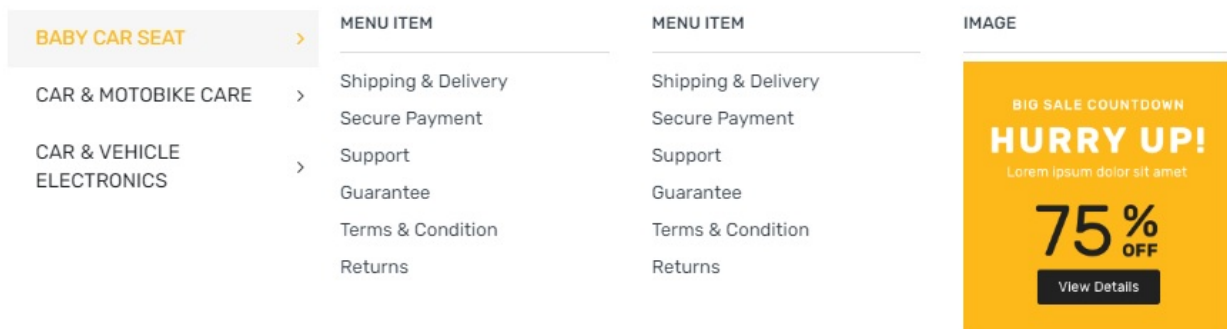

- **Product:** select product to display, we support 2 product to display at one column.
- **Collection:** display product in one collection as slider
- **Menu item & Product:** Combine Menu item & Product
- **Image:** Show one image at column.
- **None:** Display nothing. This column is off.
 - Heading: Heading title in Column.

- Only enable the column's heading on Mobile
- Link to
- **Width:** It supports to select width of component column. If you select auto column width, the content of the column will be automatically calculated. The 1/12 ratio means that the width is one-twelfth of the Mega Navigation Width. Please note that The total width of the 4 columns component must not exceed 12.
 - Eg. Auto - Auto - Auto - Auto: It's will fix 4 columns at same width
 - Eg. 2/12 - 4/12 - 3/12 - 3/12
 - The following settings will be used for each of the above components.
 - Eg: Menu item -> Use for Menu item & Multi Menu items
 - Product: -> Product component
 - Collection -> Collection component
 - Image -> Image component
 - You can config up to 4 columns.

Add Vertical Mega Navigation Content

Pretty similar to Horizontal Mega Navigation, except it only supports 3 columns

Mega Navigation with Tab

Most settings will be similar to other mega navigation content types. However due to the large amount of content, you will need to config more.

- The theme support total **7 tabs**, each tab contain 4 **columns**. Columns Content only support 4 components:
 - Menu item
 - Multi menu item
 - Image
 - None.
- Tick **Show Tab 01** to display tab 1.
- Tab Heading: Display Tab Heading, as you can see in demo is ALLURE

You can group your products into collections to make it easier for customers to find them by category. Here are a few examples of collections that you might create:

- clothes for men, women, or children
- items of a certain type, such as lamps, cushions, or rugs
- items on sale
- items in a certain size or color
- seasonal products, such as holiday cards and decorations

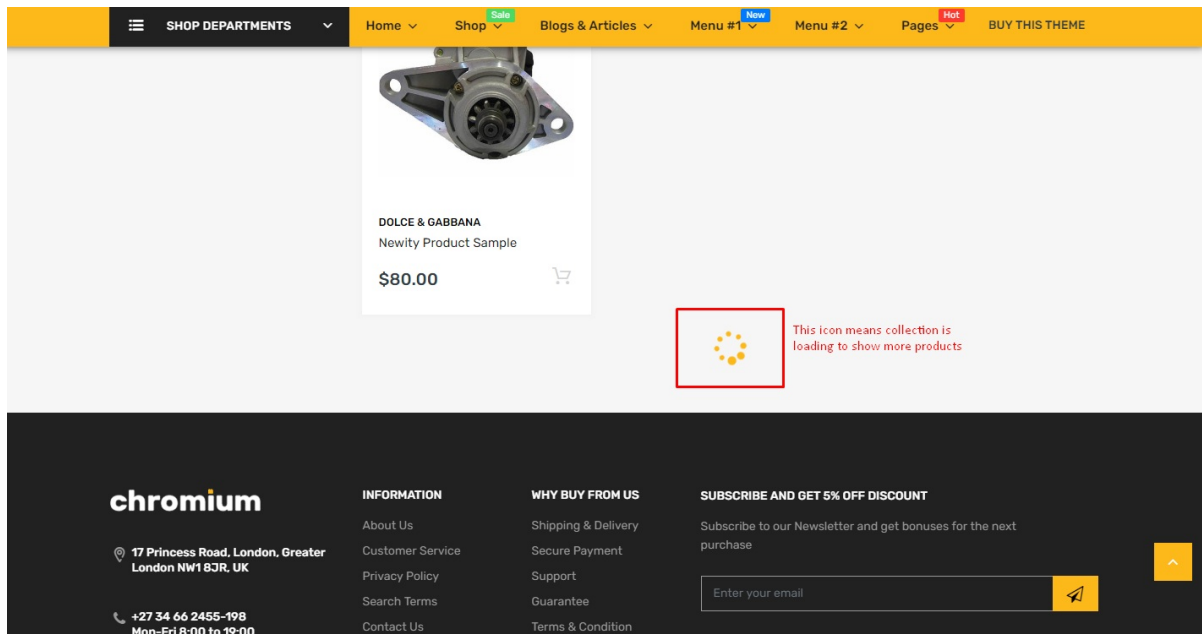

After you create a collection, it can be shown on your online store as a webpage with a gallery of the products that are in that collection. Your customers can then click a product image on the collection page to visit a specific product's page. You can help customers find and view collections by [adding links](#) to the collections in a menu in your store's navigation.

The exact layout and appearance of collection pages depends on your theme and collection templates you choose from that theme.

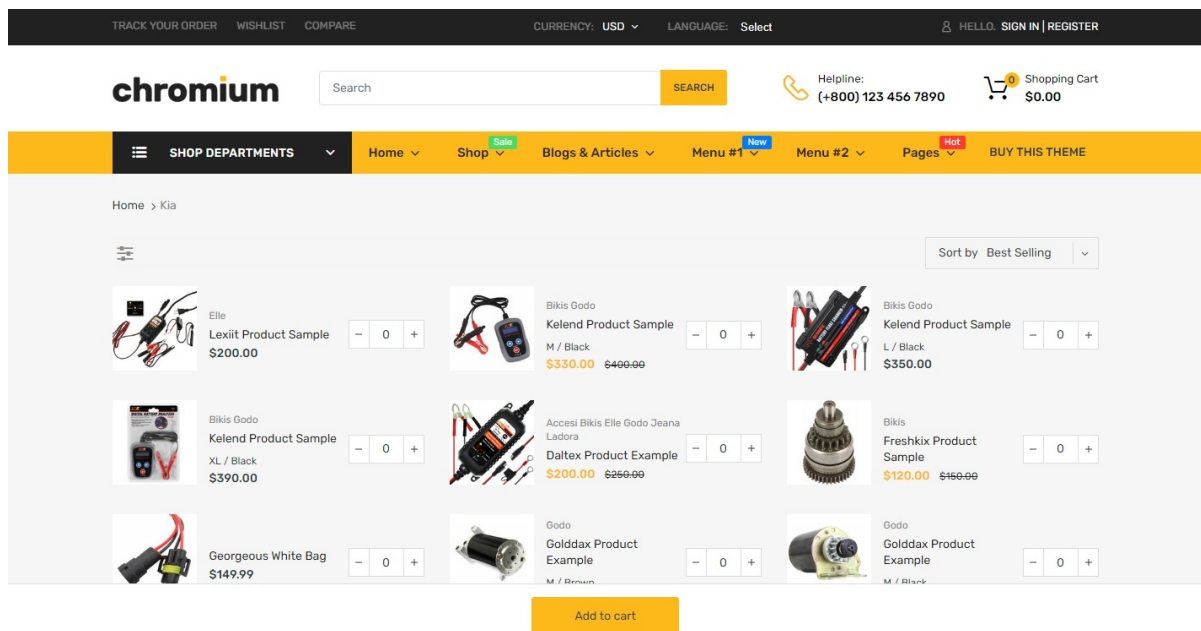

Customize Collection Page

There are 3 types of collection template in Chromium:

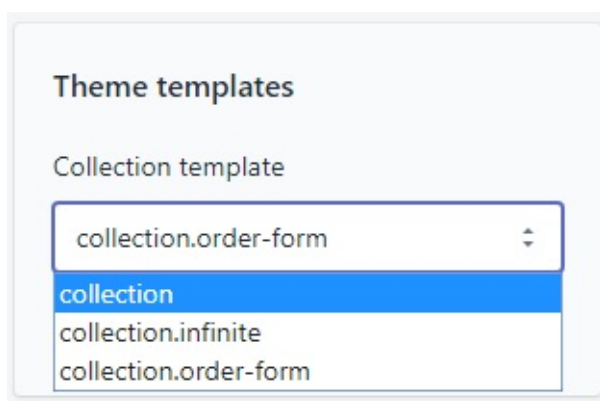

- collection
- collection.infinite

- collection.order-form

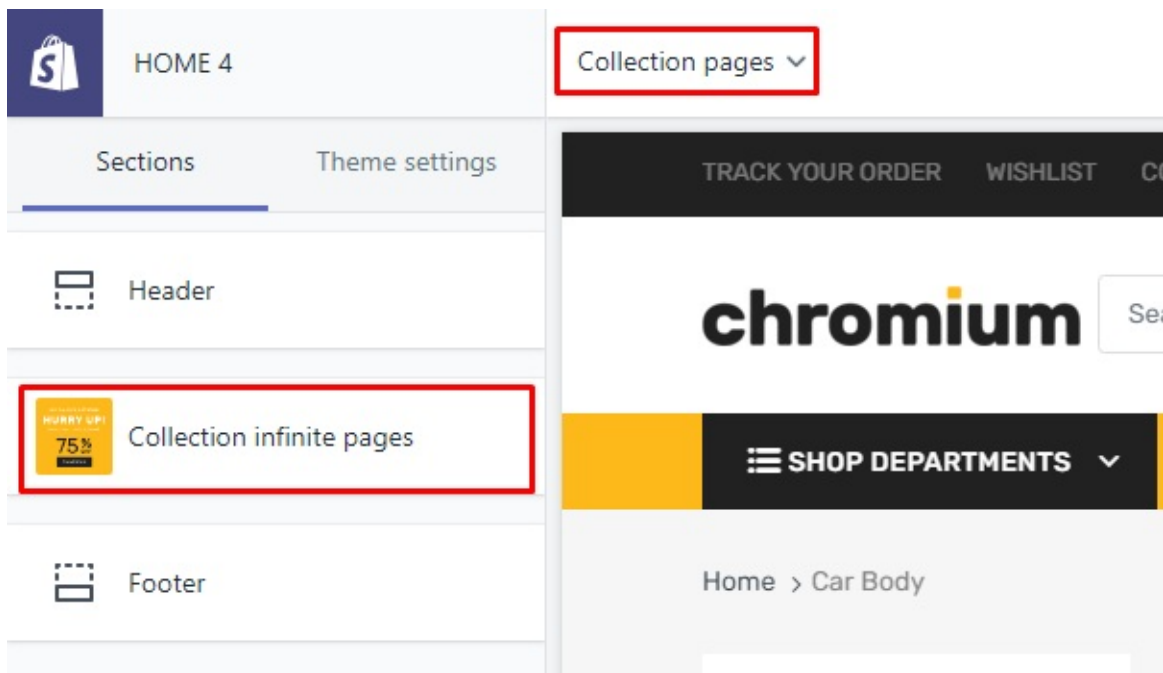

In order to select a template for your collection, at the very bottom of the most right column of your collection admin window, please find section '**Theme templates**'

They use static sections for configuration so depending on which template you choose, there will be a corresponding static section.

From your Shopify admin, go to **Online Store > Themes**

- Find the theme that you want to edit and click **Customize**
- From the top bar drop-down menu, select the type of page that you want to edit, in this case it is **Collection Pages**

Now you can modify your collection layout.

Product pages

The product page showcases a product and its variants, and includes product images, pricing information, a product description, and an Add to cart button. Every product that you have specified in the admin to be available on your online store has its own product page on your website. There are many ways that you can customize the layout, style, and behavior of your product pages.

For more detail about product page you may visit

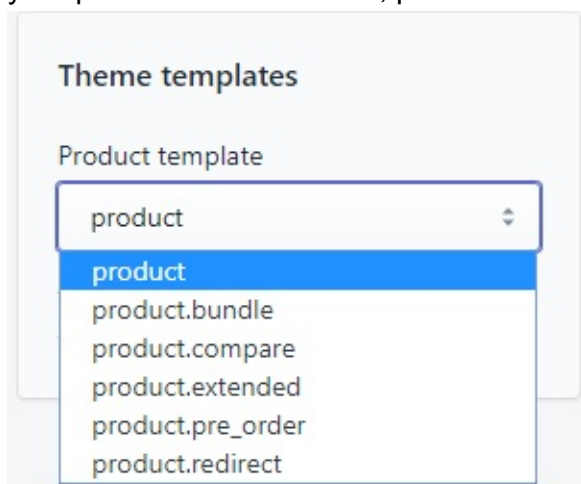

<https://help.shopify.com/en/manual/products/understanding-products>

Customize product template with sections

There are 4 types of collection template in Chromium:

- product: <https://arena-chromium.myshopify.com/products/black-fashion-zapda-shoes>
- product.bundle: <https://arena-chromium.myshopify.com/products/consectetur-nibh-eget>
- product.redirect: <https://arena-chromium.myshopify.com/products/daltex-product-example>
- product.pre-order: <https://arena-chromium.myshopify.com/products/donkix-product-sample?variant=14557183246434>

In order to select a template for your product, at the very bottom of the most right column of your product admin window, please find section 'Theme templates'

They use static sections for configuration so depending on which template you choose, there will be a corresponding static section.

From your Shopify admin, go to **Online Store > Themes**

- Find the theme that you want to edit and click **Customize**

- From the top bar drop-down menu, select the type of page that you want to edit from the top bar drop-down menu.
- Select **Product pages**. Now you will access to edit Sections for Product page. However, Shopify only support for only **1 product page template** to customize at select tab.

You can change product page template view by add

`?view=product.templateName.`

at the end of product url which redirect is product template name. Chromium support 4 more product templates named (**redirect**, **bundle**, **extended** and **pre-order**). The default template can switch with no view name (?view=).

Eg.

- https://arena-chromium.myshopify.com/products/black-fashion-zapda-shoes**?view=bundle**
- Add link text **?view=templateName** after /editor in the URL of step 2 and **click** Enter** to refresh and customize another page template section.

Eg. <https://shopify.com/admin/themes/38768541794/editor#/products/black-fashion-zapda-shoes>

To edit product bundle template

<https://shopify.com/admin/themes/38768541794/editor?view=bundle#/products/black-fashion-zapda-shoes>

To edit product pre order template

https://shopify.com/admin/themes/38768541794/editor?view=pre_order\#/products/black-fashion-zapda-shoes

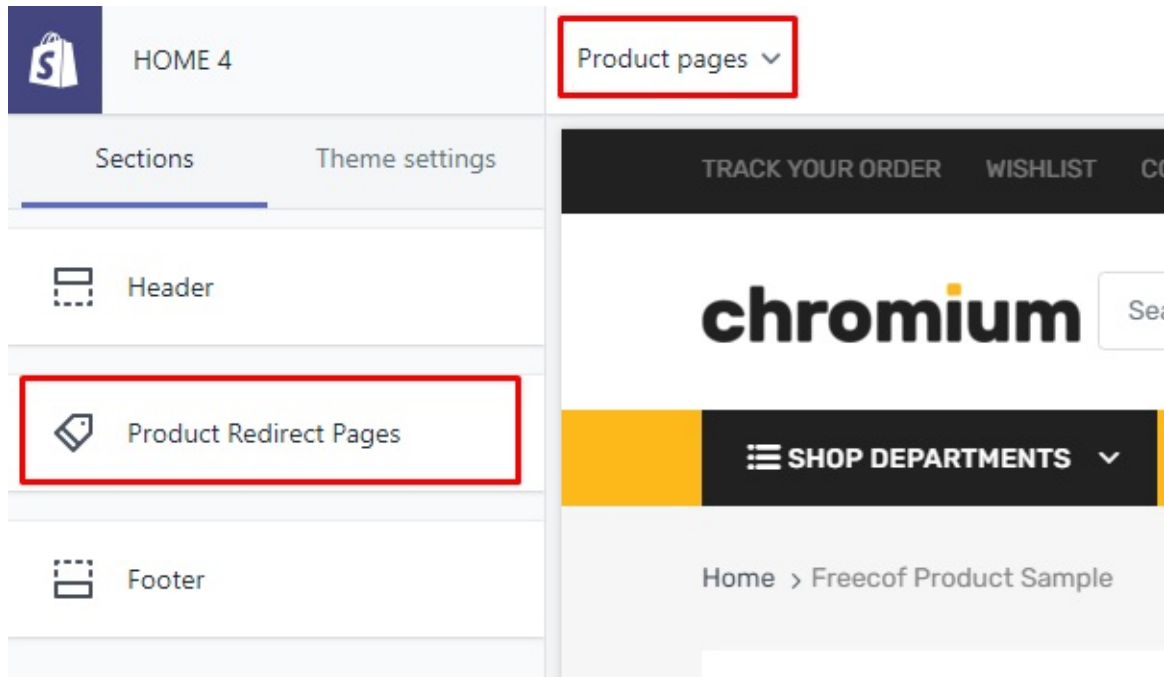

To edit product redirect template

<https://shopify.com/admin/themes/38768541794/editor?view=redirect\#/products/black-fashion-zapda-shoes>

To edit product default template

<https://shopify.com/admin/themes/38768541794/editor?view=#/products/black-fashion-zapda-shoes>

- Click to Static Sections at the left side to customize your product page.

Select Product Variant Option

Upload your color images

For the color options you have, you can either let the smartness of the script provide a color for you, or you can upload an image that represents that color.

The way I have gotten my images from my products in my demo shop was to open up each product image on my storefront in the “colorbox” (lightbox) and grab around ~ 40 by 40 pixels section of the product image, then save that small screen grab to my desktop, and rename the image.

There's an important naming convention to respect here! The image must be named after the color option, but be handleized, and have a .png extension.

For example, if you have a color called 'Déjà Vu Blue', then name your image deja-vu-blue.png

Other example, if your color is 'Blue/Gray', then name your image blue-gray.png.

1. Most simple example, if your color is 'Black', the name your image black.png.
2. From your Shopify admin, go to **Online Store > Themes**.
3. Find the theme you want to edit, and then click **Actions > Edit code**.
4. On the **Edit HTML/CSS page**, locate and click on the **Assets** folder to reveal its content.
5. Under the **Assets** heading, click on the **Add** a new asset link.
6. **Upload your image.**

Repeat steps 5 and 6 until you have uploaded all your images.

Select Product Color or Images Variant.

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the theme that you want to edit and click **Customize**.
3. **From the top bar drop-down menu, select the type of page that you want to edit.**
4. Click the Product Section to customize. Eg. Product pages default
5. Go to COLOR AND SIZE SWATCHES.
6. Click check **Adding Color Swatches** and Save. As it's show below.
7. Click check **Use variant images for swatch color**. it's will use the product variant

images instead of color.

Add Product Description Tab

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the theme that you want to edit and click **Customize**.
3. **From the top bar drop-down menu, select the type of page that you want to edit.**
4. Click the Product Section to customize. Eg. Product pages default
5. Navigate to CONTENT tab. Click **Add content**, select **Standard - Description**
6. Click Save.

Add Product Static Description Tab

Static tab are created base on Your Shopify page Content. It's usefull for some content that is same for all the products like Shipping term, Size Guide, and so on

It's require to [add a Page](#) in advance to use for the Description Tab. Eg. Shipping Term page.

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the theme that you want to edit and click **Customize**.
3. **From the top bar drop-down menu, select the type of page that you want to edit.**
4. Click the Product Section to customize. Eg. Product pages default
5. Navigate to CONTENT tab. Click **Add content**, select **Static - Page**
6. Modify **Heading** and **select Page** to use.
7. Click **Save**
8. New Description tab with display with Heading name and content of the tab is the page you select at 7.

Add Product Dynamic Description Tab

Standard tab are created base on your **Product description content**. If you'd like **unique set of tabs for each product** you should use heading 5 function. It's require to show your product description. You need to use it if you want to display the description of the product.

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the theme that you want to edit and click **Customize**.
3. **From the top bar drop-down menu, select the type of page that you want to edit.**
4. Click the Product Section to customize. Eg. Product pages default
5. Navigate to CONTENT tab. Click **Add content**, select **Standard - Description**
6. Click check **Use Multi-tabs with heading 5 tag** to active **dynamic heading description tab for each product..**
7. Click **Save**

8. Now go to your product and edit the description product and adding your unique tab for each product using

```
<h5>Tab Title</h5>.
```

If you have a Shopify online store, then you can create webpages in your Shopify admin. Webpages contain information that rarely changes or that customers will often refer, like an "About Us" page or a "Contact Us" page.

You can also [add a blog](#) to your online store for content that you'll be updating regularly, or if you want to encourage feedback.

Add a new web Page to your online store

From your Shopify admin, go to **Online Store>Pages**.

1. Click **Add page**. You will be taken to a new webpage editor.
2. In the webpage editor, enter a **Title** and **Content** in the text boxes provided.

Be descriptive and clear when choosing your webpage title. The webpage title is displayed in the tab or title bar of browsers. It is also used as the title in search engine results. [Learn more about website SEO](#).

3. In the **Visibility** field, you can choose whether you want your webpage to be published or not. By default, your new webpage will be visible when you click **Save**. Select the **Hidden** option if you want your new webpage to be hidden from your online store, or click **Set a specific publish date** to [control when your webpage is published](#):
4. In the **Template** field, you can choose page template (page type) that you would like to apply.

1. Click **Save**

(Need more info? Please refer to: <https://help.shopify.com/en/manual/sell-online/online-store/pages>)

Chromium support 4 page templates (page type).

You have to add page and select template field to show pages as our demo. It's include

- Page default - page
- Page about us - page.about
- Page contact - page.contact
- Page Gallery - page.gallery

When you install Wishlist & Compare by Arena app, it's will sync one more page templates for Compare function

- Page Compare - page.bc_compare

Customize Page template Sections

In order to customize layout for pages

From your Shopify

1. Find the theme that you want to edit and click **Customize**.
2. **From the top bar drop-down menu, select the type of page that you want to edit.**
It's will show the sections for each page.
3. **Change your Section setting** and click **Save**

Related topics

1. [Add Wishlist Compare page](#)
2. [Add Lookbook Page](#)

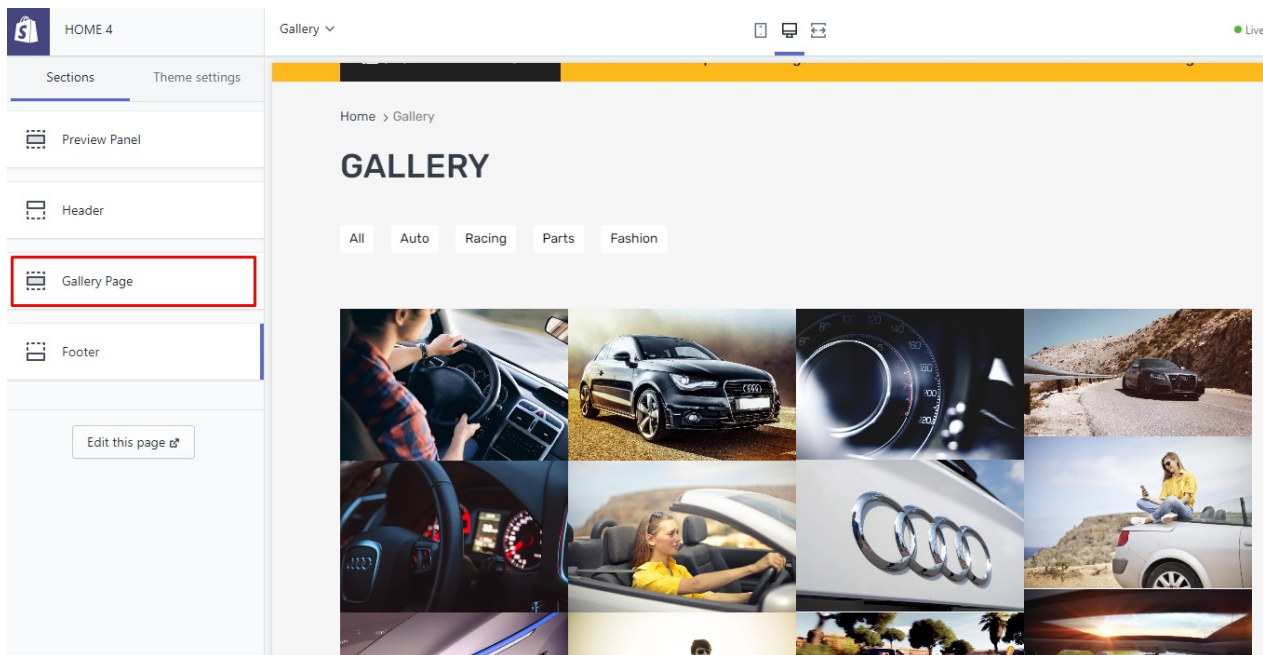

1. Creat Gallery Page

From your Shopify admin, go to Add a new page to your online store: Select page template:

- Page Gallery - page.gallery
 - Demo: <https://arena-chromium.myshopify.com/pages/gallery>

2. Customize Gallery

- From your Shopify admin, go to **Online Store > Themes**
- Find the theme that you want to edit and click **Customize**
- From the top bar drop-down menu, select **Gallery**
- Click **Gallery Page** at **Sections Sidebar**. It's show setting & content for your gallery.

- Save when you finish customize.

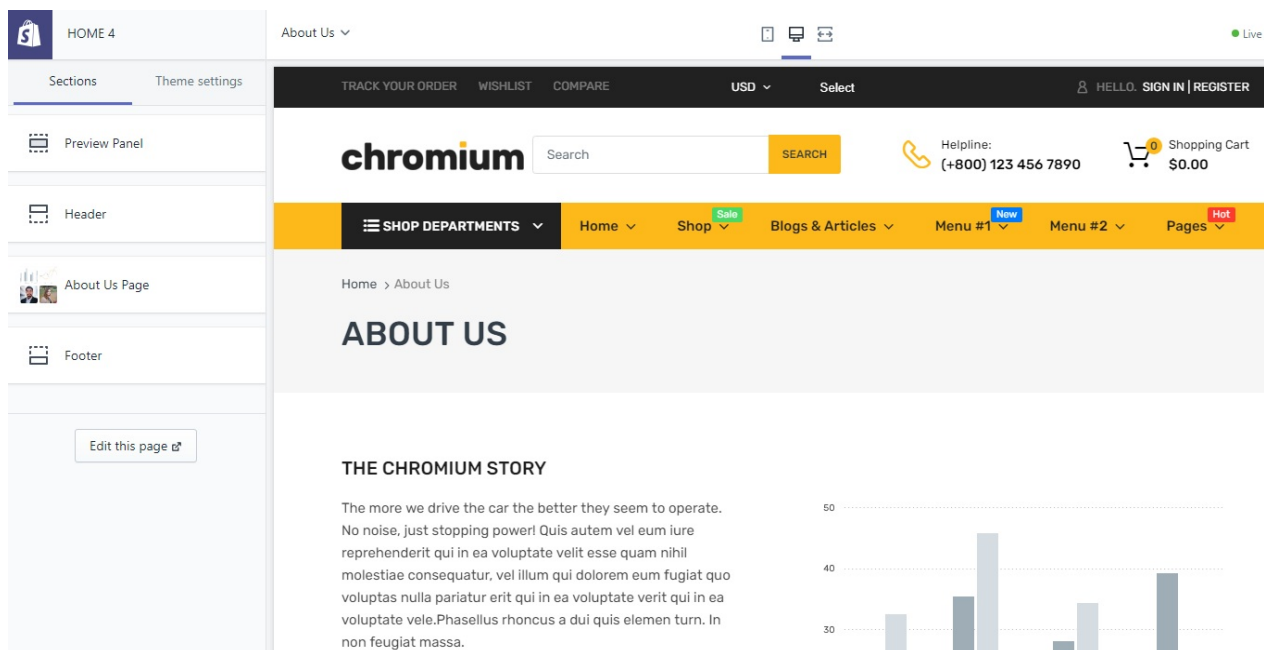

1. Creat About us & Contact us Page

From your Shopify admin, go to **Add a new page** to your online store & Select page template:

- Page: About Us - page.about
 - Demo: <https://arena-chromium.myshopify.com/pages/about-us>
- Page: Contact Us - page.contact
 - Demo: <https://arena-chromium.myshopify.com/pages/contact-us>

2. Customize About us & Contact us page

- From your Shopify admin, go to **Online Store > Themes**
- Find the theme that you want to edit and click **Customize**
- From the top bar drop-down menu, select the type of page that you want to edit from the top bar drop-down menu.
- Select the page you created at step 1 to customize Eg. **Page About Us**
- Click **About Us Page** at **Sections Sidebar**. It's show setting & content for your page.

- Click **Save** when you finish customizing.

Chromium supports 2 templates for blog.

- Blog Template 1: blog
 - Demo: <https://arena-chromium.myshopify.com/blogs/news>
- Blog Template 2: blog.02
 - Demo: <https://arena-chromium.myshopify.com/blogs/car>

To choose a template for your blog, from you admin dashboard, please go to **Blog posts > Manage blogs** and choose blog you want to edit.

Customize Blog page

- From your Shopify admin, go to **Online Store > Themes**
- Find the theme that you want to edit and click **Customize**
- From the top bar drop-down menu, select **Blogs**. Depend on template you choose, a corresponding **section** (**Blog pages** for template 'blog' and **Blog-02 pages** for template 'blog.02') will appear in **Sections** sidebar.

Customize Blog posts (articles) page

- From your Shopify admin, go to **Online Store > Themes**
- Find the theme that you want to edit and click **Customize**
- From the top bar drop-down menu, select **Blog posts**. A corresponding **section** (**Article pages**) will appear in **Sections** sidebar.

Converting currencies in your store

You can use the multiple currencies script in your theme to show your prices in a currency that your customers are familiar with.

The multiple currencies script can be used to help your customers view product prices in a currency that they are familiar with, but the currency will always switch back to your store's currency at checkout. Your store's currency is the currency that you have set up on the [General settings](#) page of the admin.

From your Shopify admin, go to

1. Click **General**.
2. In the **Standards and formats** section, click the **Change formatting** link.
3. In the **HTML with currency field**, wrap the existing content in an HTML span element with a class name set to `money` . If your store currency is United States Dollars (USD), then the format will look like this:

```
<span class=money>$ USD</span>
```

4. In the **HTML without currency field**, enter the exact same content that you entered in the **HTML with currency field**. Adding the currency descriptor to both formats will help to differentiate between currencies that use the dollar sign (\$). If your store currency is United States Dollars (USD), then the format will look like this:

```
<span class=money>$ USD</span>
```

CURRENCY FORMATTING

Change how currencies are displayed on your store. `{{amount}}` and `{{amount_no_decimals}}` will be replaced with the price of your product.

HTML with currency

```
<span class=money>${{amount}} USD</span>
```

HTML without currency

```
<span class=money>${{amount}} USD</span>
```

Email with currency

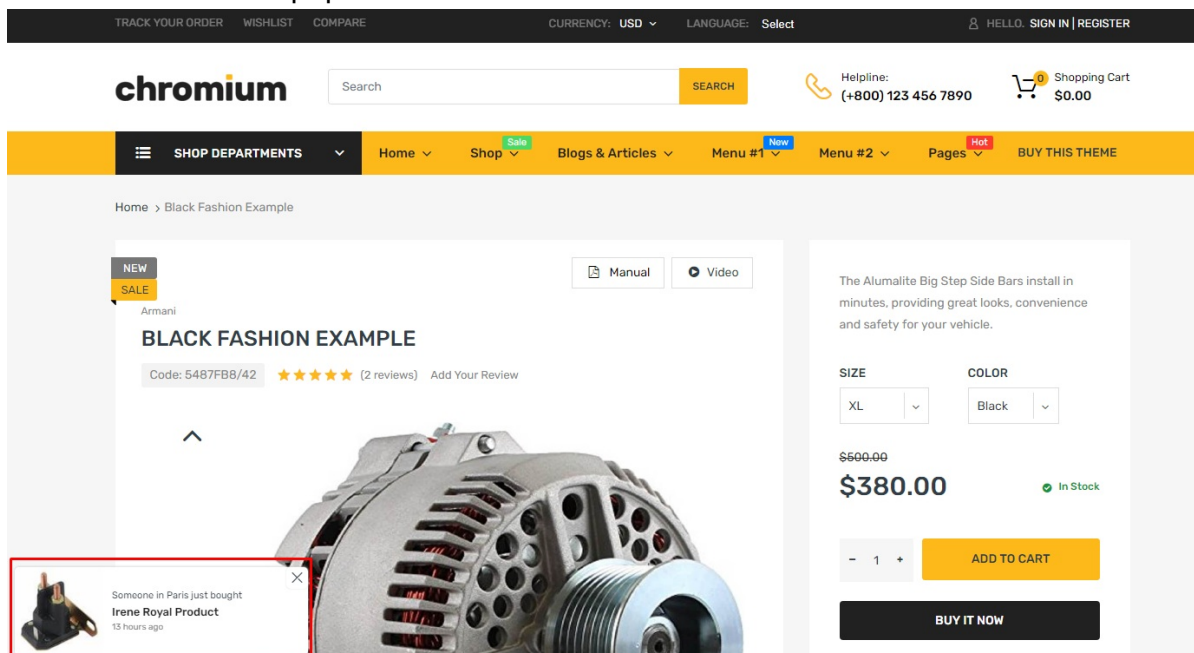

```
{{amount}} USD
```

Email without currency

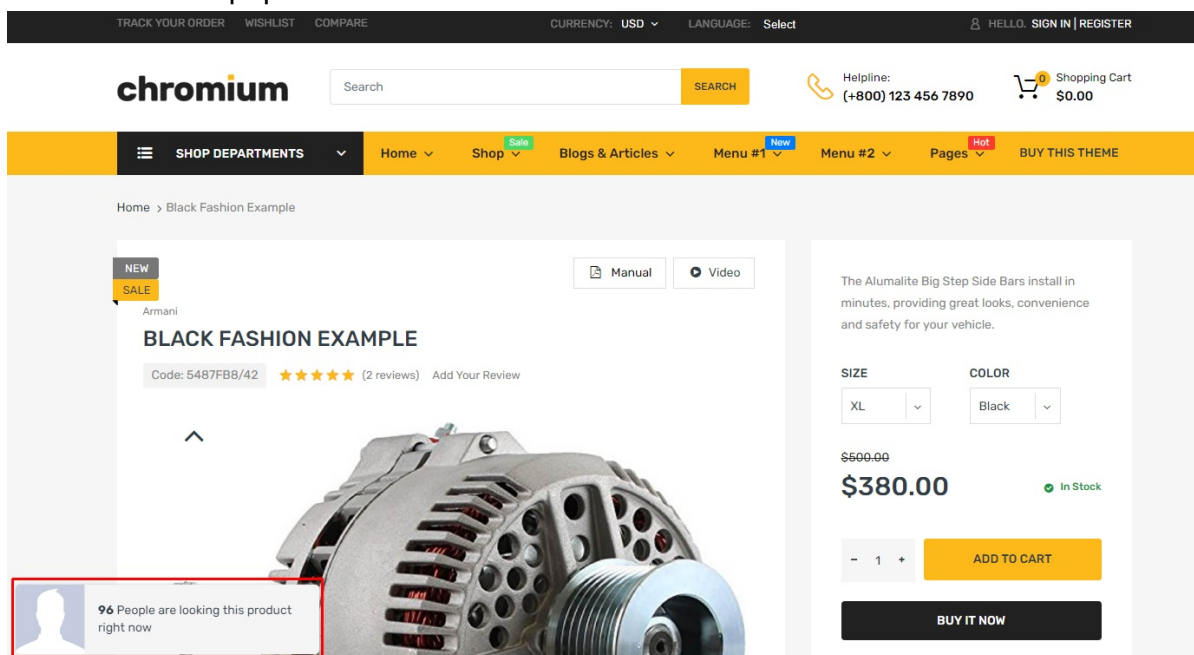

```
{{amount}} USD
```

At **FOMO Popup**, you can customize:

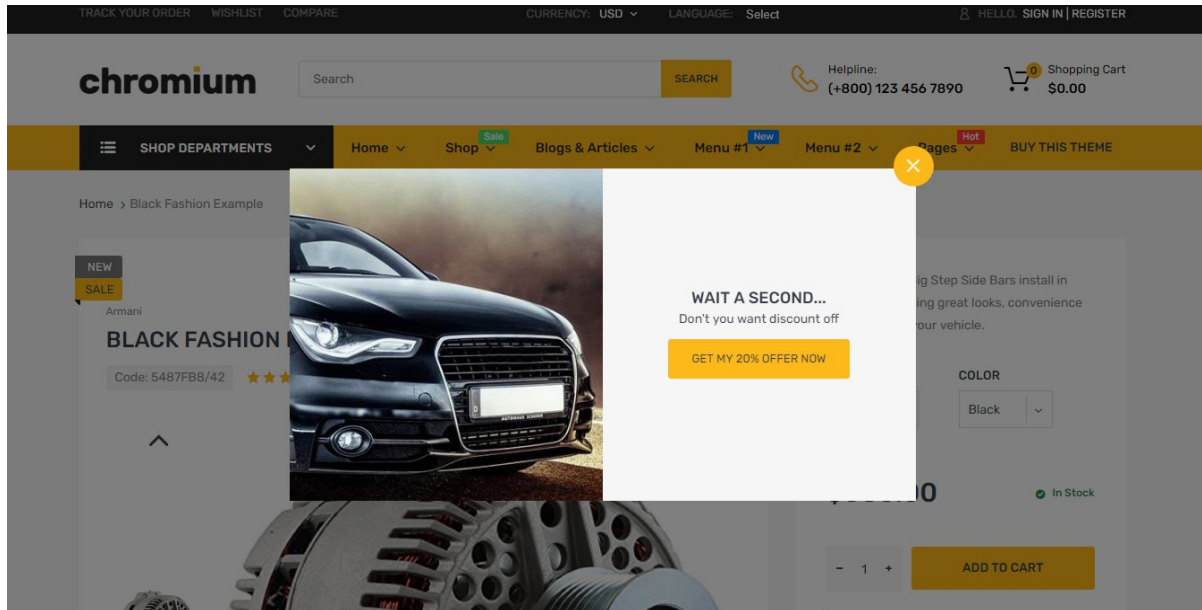

- Sales Notification Popup

- Visitor Count Popup

- Discount Popup

This popup is used to offer your customers a fixed value, percentage, or shipping discount on products, collections, or variants in your store at the first time they move the mouse's cursor out off browser window on specific product pages. The following instruction will guide you how to use this popup:

1. Add 2 metafields:

- namespace: c_f
- key: discount_code
- value: Add your Coupon code for the product

- namespace: c_f
- key: discount_percent
- value: Display percent of discount

In which:

- Discount code: The **discount code** you create

- Discount percent: The discount percent OR fixed amount value you apply to your discount code (if you choose these 2 types)

Filter is a function in collection pages. From your Shopify admin, go to **Online Store > Themes**

- Find the theme that you want to edit and click **Customize**
- From the top bar drop-down menu, select **Collection pages**.
- Access collection section to configurate collection filter.

- Go to **Add content** and choose **Filter**.

In Shopify, it uses **logical AND operator**, meaning if you choose 2 tags, eg: **Black** and **White**, collection will only show any products that holds these 2 tags. Products that don't have these 2 tags or only have 1 of them won't meet the condition to be displayed.

Therefore, we developed our theme so that you can opt not to use **logical AND operator** (Disable 'AND' operator in a group filter). Once you choose that option, Shopify's **logical AND operator** will be changed to **logical OR operator**, which means if you choose 2 tags, eg: **Black** and **White**, collection will show any products that have 1 (**Black** or **White**) or both these 2 tags.

Collection pages

Filter

To setup Filter by Groups like our demo, please add product's tag to format 'Group'_'Value'. For example: Color_Black, Brand_Elle

☒ Disable 'AND' operator in a group filter

Filter type

Filter by Groups

Group use in filter

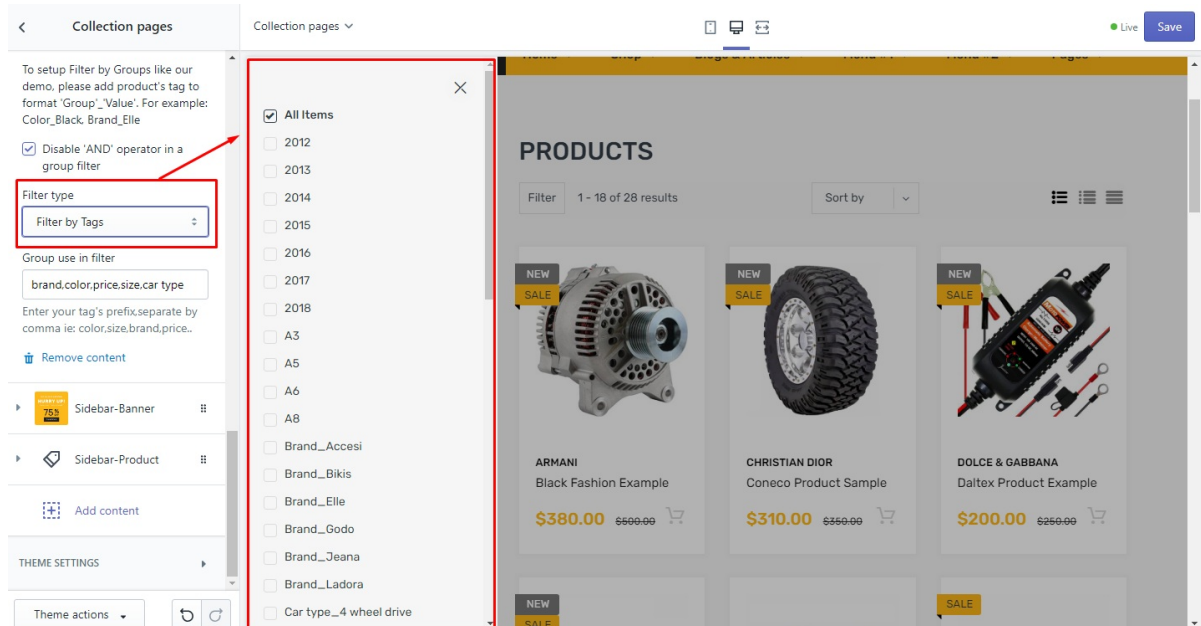

brand,color,price,size,car type

Enter your tag's prefix,separate by comma ie: color,size,brand,price..

Remove content

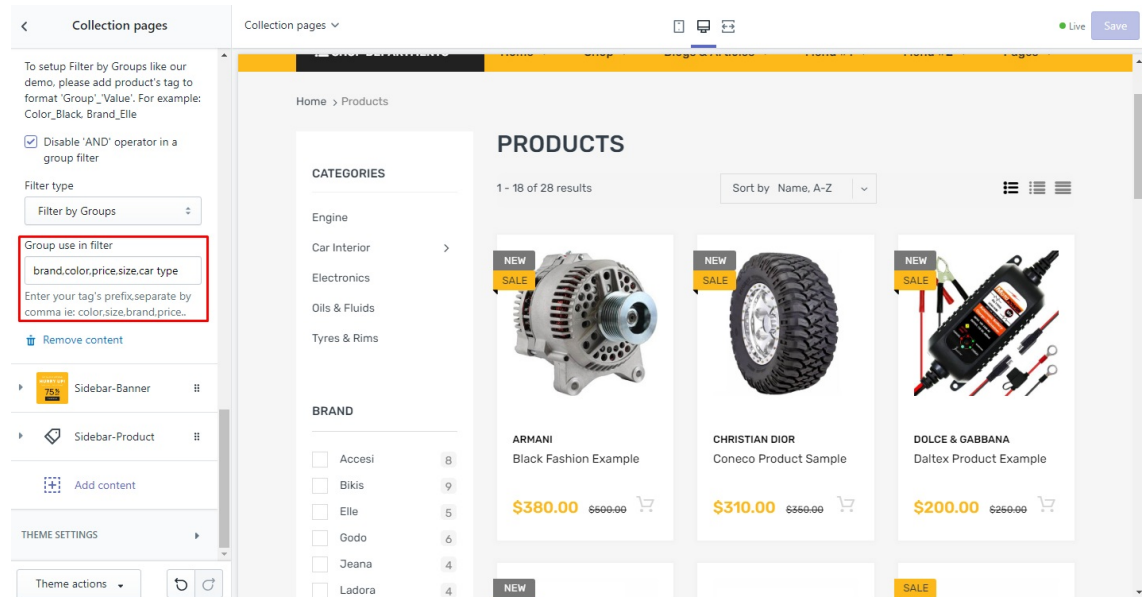

Our theme supports 2 types of filter:

- **Filter by Tags:** It will show all product tags you have in current collection page.

- Filter by Groups: It will divide your tags to groups according to your designation
 - To setup Filter by Groups like our [demo](#), please add product's tag to format

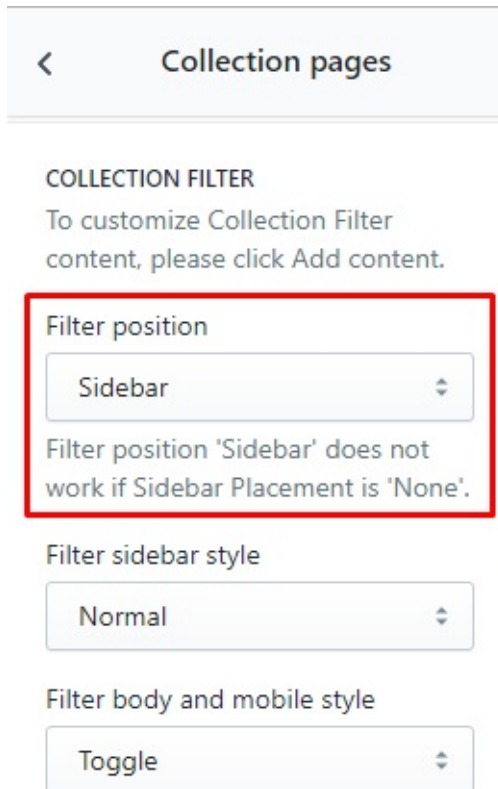

'Group'_'Value'. For example: Color_Black, Brand_Elle, Car type_Coupe. Then input groups' name to:

By doing so, you will have the following groups and their corresponding values:

- **Color:** Black
- **Brand:** Elle
- **Car type:** Coupe

In Chromium, filter position can be set whether in collection's sidebar or collection's body.

- Example
 - Sidebar:

■ Normal style:

The screenshot shows the 'Collection pages' configuration interface on the left and its live preview on the right. In the configuration panel, the 'Filter sidebar style' is set to 'Normal' (highlighted with a red box). The live preview shows a sidebar with two sections: 'BRAND' and 'CAR TYPE', each with a list of items and their counts. The main content area displays a grid of product cards for various brands like Armani, Christian Dior, and Dolce & Gabbana.

■ Accordion style:

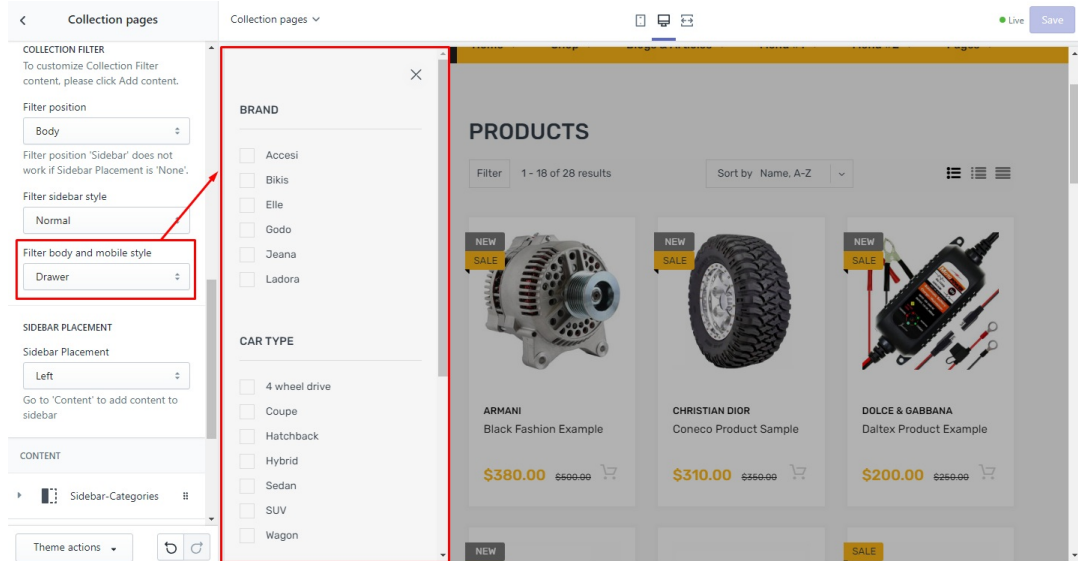

The screenshot shows the 'Collection pages' configuration interface on the left and its live preview on the right. In the configuration panel, the 'Filter sidebar style' is set to 'Accordion' (highlighted with a red box). The live preview shows a sidebar with sections like 'BRAND', 'CAR TYPE', 'COLOR', and 'PRICE', each with a dropdown arrow. The main content area displays a grid of product cards, including a 'HURRY UP!' promotional banner.

○ Body

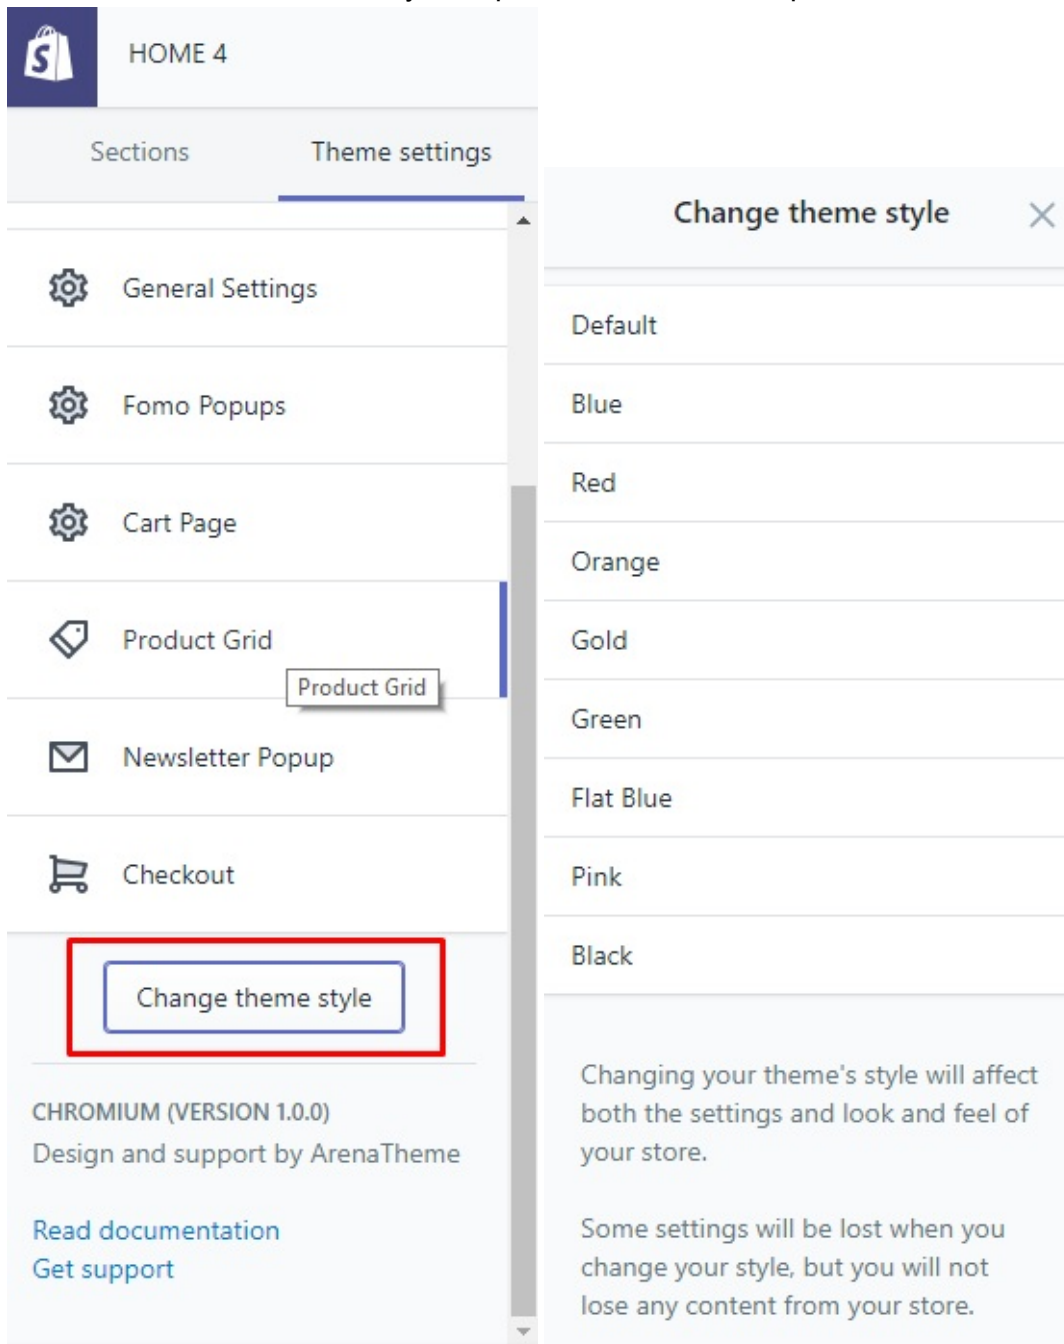

■ Toggle style: filter will slide down when clicking **Filter** button

The screenshot shows the 'Collection pages' configuration interface on the left and its live preview on the right. In the configuration panel, the 'Filter body and mobile style' is set to 'Toggle' (highlighted with a red box). The live preview shows a 'PRODUCTS' page with a 'Filter' button. Clicking the button reveals a toggle-style filter panel with sections for 'BRAND', 'CAR TYPE', 'COLOR', and 'PRICE'. The main content area displays a grid of product cards.

- **Drawer style:** Filter will slide from left side when clicking **Filter** button

In our theme, we have already set up some theme color options to choose via:

However, please note that those color options are only applied to Theme settings colors. For color of each section, you have to access that corresponding section to set up color manually.
